RE: Update to MUT-III SE  
TIN NO. TIN-17-00-001 (REVISED)

This TIN is being revised to clarify that K-Line reprogramming will continue to be performed with MUT-III, not MUT-III SE.

**AFFECTED VEHICLES:** All Models

**PURPOSE**

A MEDIC update (number M3445) has been posted for MUT-III SE that is designed to improve your technicians' efficiency and productivity. **ALL CAN reprogramming will be performed with MUT-III SE**, instead of MUT-III, from this update forward. The reprogramming process with MUT-III SE is much more efficient, and easier to use than MUT-III. Be sure to download this latest update to keep up with the improved features MUT-III SE provides.

*K-Line reprogramming will transition to MUT-III SE in the future. Until then, please continue to use MUT-III for reprogramming on all K-Line vehicles.*

*For help identifying K-Line and CAN vehicles, refer to the ["Reprogramming System Identification"](#) chart on MDL, under "service → service tech resources → Service Related Items → Worksheets, Questionnaires, Job Aids → Job Aids." (A copy is also included at the end of this TIN.)*

The MUT-III SE reprogramming procedure is very similar to MUT-III, but is much more intuitive with fewer screens to navigate. Below are the initial steps to start a reprogramming procedure.

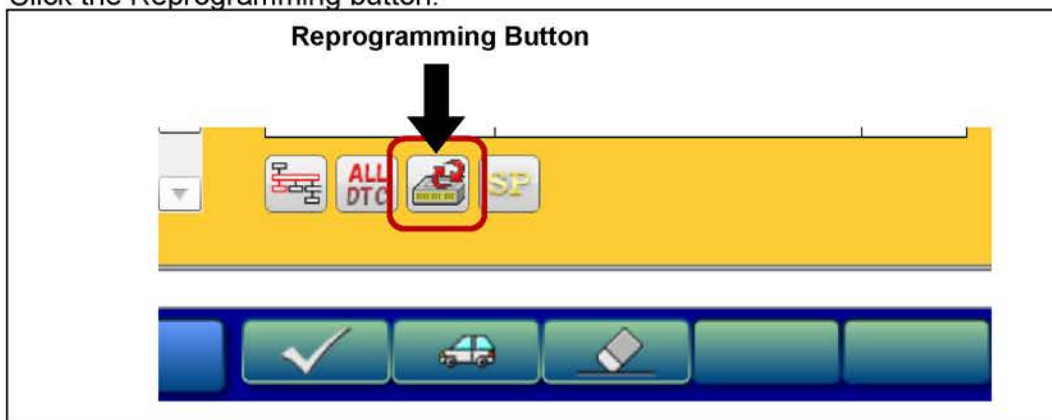

1. Open the MUT-III SE main page, and click the "STV" button.

2. Make all appropriate selections in the System Select screen. Notice that more vehicle information is filled in automatically.

3. Click the Reprogramming button.

4. Click "ECU Reprogramming (SDB)," then follow all screen prompts as before with MUT-III.
