

Subject: 2004-2009 MAZDA3 (5-DOOR) - HAZY REAR COMBINATION LAMP LENS	M-Tips No.: MT-013/17
	Last Issued: 07/06/2017

DESCRIPTION

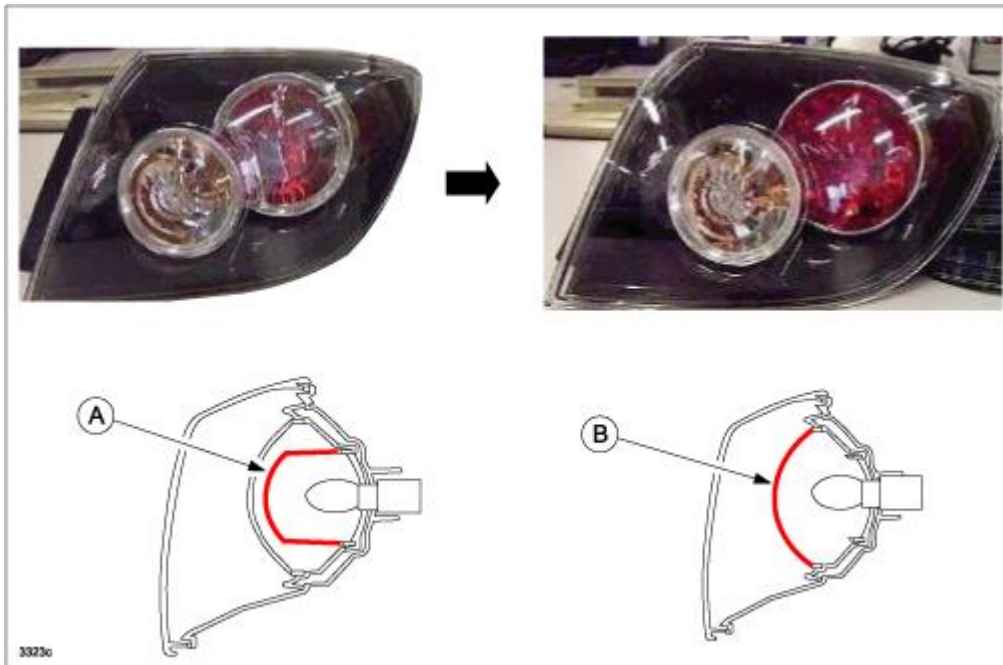

On some vehicles, the rear combination lamp lens becomes hazy and looks white when the brake or taillight is on.

Due to heat accumulated by extended brake light (E) usage, the red inner cap(A) is melted (B) and the inner (C) and/or outer (D) lens becomes hazy.

Customers having this concern should have both rear combination lights replaced with modified ones(red inner cap (A) is eliminated and red inner lens (B) is used).

PARTS INFORMATION

Part Number	Description
BWYD-51-170	Rear combination light (right)
BWYD-51-180	Rear combination light (left)
