

Service Bulletin

PRELIMINARY INFORMATION

Subject: MIL On With Loss Of Power and/or Stall Concern With P0641 Set and Various Other Codes.

Brand:	Model:	Model Year:		VIN:		Engine:	Transmission:
		from	to	from	to		
Buick	LaCrosse	2017	2017	All	All	3.6L LGX	Any
Cadillac	ATS	2016	2017	All	All	3.6 LF4, LGX	Any
Cadillac	CT6	2016	2017	All	All	3.6 LGW, LGX	Any
Cadillac	CTS	2016	2017	All	All	3.6 LF3, LGX	Any
Cadillac	XT5	2017	2017	All	All	3.6 LGX	Any
Cadillac	XTS	2016	2017	All	All	3.6 LF3	Any
Chevrolet	Camaro	2016	2017	All	All	3.6 LGX	Any
GMC	Acadia	2017	2017	All	All	3.6 LGX	Any

Involved Region or Country	North America
Additional RPO/s:	N/A
Condition	Loss of power or stall and Check Engine Light on with a P0641 and various other codes set.
Cause	An internally shorted fuel rail pressure sensor concern has been identified by the supplier. .

Correction

If P0641 is found on any of the above vehicles, along with other codes, unplug the fuel rail pressure sensor to see if that sensor is the cause of the 5V1 reference line being brought low (shorted).

If you find the fuel rail pressure sensor to be internally shorted, replace the sensor with current part available.

All current stock has been inspected and is known good.

This PI will be updated when a breakpoint is determined for known good build vehicles and an end point VIN will be established.

GM bulletins are intended for use by professional technicians, NOT a "do-it-yourselfer". They are written to inform these technicians of conditions that may occur on some vehicles, or to provide information that could assist in the proper service of a vehicle. Properly trained technicians have the equipment, tools, safety instructions, and know-how to do a job properly and safely. If a condition is described, DO NOT assume that the bulletin applies to your vehicle, or that your vehicle will have that condition. See your GM dealer for information on whether your vehicle may benefit from the information.
