

Intermittent Low Coolant Warning In The Instrument Cluster

ATI Binder – Group 1
 This ATI replaces ATI Group 9, #1616,
 dated 6-17-2016.

Vehicle Type: **991**

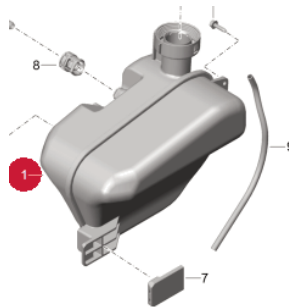

Model Year: **2016 built after 11/01/2016**

Part Number: 991 106 157 05

Issue: Intermittent low coolant warning on this instrument cluster.

Information: The customer states that the low coolant warning came on the instrument cluster and the temperature gauge went to full hot (or overheated). Fault “OOA046 Warning: Coolant level” may also be stored in the instrument cluster.

- Note: When the vehicle thinks the coolant level is low it will move the temperature gauge to full hot. The vehicle has NOT overheated. It does this because it cannot get an accurate coolant temperature if the coolant level is low, therefore it moves the temperature gauge to full hot as a precautionary measure.

There is a plastic float in the coolant reservoir that can bind, causing a false low coolant level warning.

Check the cooling system as per WM190101. If no leaks or other defects in the cooling system can be found, then replace the coolant reservoir with the above part number.
