2009-2014 3.0 TDI Touareg AdBlue Injector Quantity Volume Test

When performing the injector quantity test on the AdBlue dosing valve using the test plan in Guided Fault Finding, the specification of 164-176 ML is incorrect. This is the specification for Passat 2.0 TDI. Please use Control module OBD and activate the test. The specification is 30 ML or 1 ounce, after the ten minute test is completed.
