2011-2014 Touareg - 3.0L TDI Ad Blue® Reset Procedure

Update to information: May 23, 2014.

To reset the Ad Blue level light after the tank has been filled:

Go to Guided Fault Finding:

From the control module list view: Right click on the ECM.

Select Guided Functions > SCR system functions > Ad Blue level to full"

If the light is still present after the reset procedure:

1. ECM control module OBD
2. DTC memory
3. Erase DTC all OBD system (even if there are no faults)
4. Cycle the key off and on
5. Light in the cluster should go off
6. If the light still does not go off, then follow the procedures in GFF.

If light still will not reset, remove fuse S17 from ECM cowling panel and start engine to set system faults.

Reinstall fuse, clear codes, start engine and verify light has reset.
