**Freightliner
Service Bulletin**

General Information

Vehicles built at the Portland Truck Manufacturing Plant (TMP) after January 1, 2004, will be painted with PPG paints. PPG paints are designed to provide excellent appearance in texture and gloss level and a very consistent paint viscosity for better overall application. PPG is matching to DuPont color standards and will be doing on-going verification to insure customers' vehicles match perfectly with their current fleet colors. Special order colors and requests for color standards are being handled through the CAE color group, just as they are now with DuPont. Freightliner Trucks is identifying all trucks scheduled to be built in Portland that are affected and will make the necessary changes to accommodate the new paint codes. New paint support materials will be distributed as soon as they are available.
