

SERVICE BULLETIN

Classification:

AT19-011a

Reference:

February 14, 2020

Date:

2013-2017 SENTRA; CVT JUDDER

NTB19-075a

This bulletin has been amended. See AMENDMENT HISTORY on the last page. Please discard previous versions of this bulletin.

APPLIED VEHICLES:2013-2017 Sentra (B17)APPLIED ENGINE:MRA8DE (non-turbo engine)APPLIED TRANSMISSION:CVT (RE0F11A)

IF YOU CONFIRM

The customer reports a transmission judder (shake, shudder, single or multiple bumps or vibration), hesitation on acceleration, lack of power or RPM flare.

ACTION

Refer to the **Repair Overview** on pages 2 and 3.

IMPORTANT: The purpose of ACTION (above) is to give you a quick idea of the work you will be performing. You MUST closely follow the entire SERVICE PROCEDURE as it contains information that is essential to successfully completing this repair.

Nissan Bulletins are intended for use by qualified technicians, not 'do-it-yourselfers'. Qualified technicians are properly trained individuals who have the equipment, tools, safety instruction, and know-how to do a job properly and safely. **NOTE:** If you believe that a described condition may apply to a particular vehicle, DO NOT assume that it does. See your Nissan dealer to determine if this applies to your vehicle.

Repair Overview

Table of Contents

Weights

- CVT assembly. 150 lbs. approximatelyCVT sub-assembly: 40 lbs. approximately

SERVICE PROCEDURE

IMPORTANT: Repairs performed for this bulletin require CONSULT-III plus (C-III plus) **Diagnostic result reporting function-Setting** be turned ON and **Diagnosis** <u>(AII)</u> <u>Systems</u>) be performed. If not done, it may result in a repair being non-warrantable.

Precautions when Disassembling a CVT Assembly

IMPORTANT:

Transmissions are vulnerable to particle contamination (dust, metal, lint, etc.).

When disassembling a CVT, make sure your work environment (shop, workbench, etc.), transmission area (sub-frame, oil pan, harness connector, etc.), and your hands are free of any contamination.

It is essential that any foreign contamination be kept out of the CVT internals. Disassembly and re-assembly shall be carried out under the following conditions:

NOTICE To prevent possible drivability concerns, cover all air breather and drive shaft holes to prevent water intrusion.

- Wash and clean the exterior of the CVT assembly prior to disassembling.
- Work in a covered indoor room to prevent contamination of the CVT.
- Work on a clean stainless drain table.
- Avoid debris from dropping into the converter housing, side cover or CVT case.
- Remove any sealant remaining on bolts or mating surfaces of the converter housing, side cover and/or the CVT case using a scraper, and then clean with lint-free paper cloths.
- Do not use cotton gloves or woven cloths. Latex or rubber gloves are recommended.
 > Use only lint-free paper cloths.
- Apply rust penetrant to locator / dowel pins on the torque converter housing and side cover of CVT and allow to soak as needed.
- Only disassemble those parts which are mentioned in this bulletin.
- Make sure all parts are clean prior to assembling / installing.
 - > Brake cleaner is acceptable to remove remaining CVT fluid and residual sealer.
 - > Unpack service parts just before installation.
- Use only specified sealant material.
- Store the related parts that have been removed separately to prevent being mixed up; small cups can be used.

Figure 15

NOTICE Non-warrantable damage to the CVT may occur if the steps in this procedure are not followed in order.

Inspection for Abnormal Noise

HINT: If DTCs are stored, abnormal noise may be present.

Listen for any abnormal CVT noises under the following conditions:

Set the parking brake, and start the engine.

• If an abnormal CVT noise stops once the CVT is shifted into drive or reverse, <u>this</u> <u>bulletin does not apply</u>.

> Refer to ASIST for further diagnostic information.

• If an abnormal CVT noise occurs while the CVT is in Drive (D) or reverse (R), proceed to **Control Valve (Valve Body) Removal** on the next page.

NOTICE

- To avoid damage to the CVT, never allow any chemicals or fluids other than NS-3 CVT fluid or suitable cleaners to enter the CVT assembly.
- To avoid damage to the CVT, never allow any foreign debris, dust, dirt, etc. to enter the CVT assembly.
- 1. Write down all audio presets.

Presets	1	2	3	4	5	6
AM						
FM 1						
FM 2						
SAT 1						
SAT 2/3						
Bass	Treble	e Ba	lance	Fade	Speed Sen.	Vol.

- 2. Place the vehicle on a lift.
- 3. Before lifting the vehicle, place the transmission gear selector in <u>Neutral</u>.
- 4. Disconnect both battery cables, negative cable first.
- 5. Raise the vehicle, and then drain the CVT fluid by removing the drain plug.
 - Remove engine under cover if needed.

ACAUTION To avoid the risk of minor personal injury, use caution when looking into the drain hole as there is the risk of fluid entering the eye.

- 6. Disconnect the engine room harness from the CVT.
- 7. Remove the oil pan mounting bolts, and then remove the oil pan and oil pan gasket.
 - Do not discard the bolts. These will be reused during assembly.

Figure 16

- 8. Oil pan gasket 11. Drain plug gasket

- Control valve
 O-ring
 Magnet
- 12. Drain plug

13/147

8. Inspect the inside of the CVT pan for any evidence of broken parts.

EXAMPLE:

Figure 18 and Figure 19 are acceptable for this repair – Magnets with fine debris or sludge in any amount.

Figure 18

Figure 19

Continue to the next page.

Figure 20, Figure 21 and Figure 22 are No Good (NG) for this repair - Broken parts would include pieces of bearings, clutch material, belt elements, etc.

Figure 20

Figure 21

Continue to the next page.

Figure 22

- Is there any evidence of broken parts or excessive debris?
 - YES: Replace the CVT assembly as follows:
 - a. Document the debris found with a video (see page 147 for details).
 - b. Reinstall the CVT oil pan gasket and oil pan.
 - c. Call the PCC for CVT replacement authorization (see page 147 for contact information).
 - d. Refer to the Electronic Service Manual (ESM), section **TM Transaxle & Transmission** for CVT replacement.
 - **NO:**
 - ▶ If DTC P17F0 is not stored, proceed to step 10.
 - > If DTC P17F0 is stored, continue to step 9.
- 9. Install the original (removed) CVT oil pan gasket and oil pan temporarily with at least two oil pan bolts, hand tight. Skip to step 30 on page 33.
- 10. Remove the three (3) oil strainer bolts, and then remove the oil strainer from the control valve.
 - These bolts will be reused.

Figure 23

- 11. Remove the nut and washer, and then remove the manual plate shown in Figure 24.
 - Use a screwdriver to hold the manual plate (Figure 25) to keep the shaft from rotating while removing the nut.
 - Do not discard the nut and washer. These will be reused during assembly.
- 12. Clean around the CVT unit harness connector to prevent foreign materials from entering into the CVT case (picture not shown).

Figure 24

Figure 25

- 13. Remove <u>ONLY</u> the eleven (11) control valve bolts circled in yellow with markings as shown in Figure 26.
 - On this model transaxle, <u>Do NOT</u> remove the bolts with a single dot over the "7" (not shown).
 - The bolts removed will be reused.
- 14. Press the CVT unit harness connector down into the transaxle case, and then remove the control valve from the transaxle case.

NOTICE Transaxle damage may occur if care is not taken when handling the CVT unit harness connector.

CVT Belt Visual Inspection

15. Secure the passenger side (RH) front wheel with a suitable strap.

- a. Connect the first hook of the strap to the coil spring as shown in Figure 27.
- b. Route the strap around the center of the tire and attach the second hook through the eyelet of the first hook that is attached to the coil spring.
- c. Tighten the strap sufficiently to keep the passenger side (RH) front tire from rotating but do not overtighten.
- d. This will assist in making the belt turn during the borescope belt inspection step.

Figure 27

- 16. Mark the driver side (LH) front wheel with a suitable marking.
 - This will ensure all 360° of the belt is inspected.

17. Inspect the entirety of the two sides of the belt that come in contact with the pulleys (Figure 28).

IMPORTANT:

- Reference Figure 40 through Figure 48 on pages 26-29 for comparison.
- Use borescope J-51951 with mirror attachment.
- Be sure to remove the protective film from the mirror before the first use.
- Clean the camera lens and mirror before each inspection. Use 90% isopropyl alcohol, and a lens swab from Lens Swab packet J-51963 listed in **PARTS** INFORMATION on page 140.
- Before inspecting, make sure the camera handle's AA batteries are fresh and the LCD monitor's battery is charged.

Figure 28

- a. Install the Clutch Engagement Tool (J-52273) to the CVT case with two bolts finger tight where shown in Figure 29 and Figure 30.
 - Bolt torque not to exceed: 2.26 N•m (0.23 kg-m, **20 in-lb.**)

NOTICE

- > Use care when tightening the bolts as damage to the bolts/CVT could occur.
- Make sure an O-ring is installed to the Clutch Engagement Tool (J-52273) before installation as this could lead to improper/incomplete testing.

HINT: The O-ring for the Clutch Engagement Tool comes with the attachment. To order additional O-rings, refer to **PARTS INFORMATION** on page 140.

Figure 29

Figure 30

b. Connect the Hand pump from Evap Pressure Test Kit (J-42909) to the Clutch Engagement Tool (J-52273) and pump to 30 PSI (Figure 31).

IMPORTANT:

 Proper pressure has been achieved when the CVT belt moves while the driver side (LH) front wheel is rotated and the CVT is in NEUTRAL with the passenger side (RH) front wheel secured.

NOTICE

- Do NOT over-pressurize the system as internal damage to the CVT could result.
- The hand pump should be removed from the Clutch Engagement Tool (J-52273) quick connect once the clutch has been engaged and the belt is observed moving with tire rotation. Pressure will be retained.

Figure 31

- c. Insert the borescope where shown in Figure 32 as follows:
 - i. Face the mirror of the borescope toward the driver side of the vehicle (CVT side cover).
 - ii. Insert the lens approximately 7.5 inches from the CVT oil pan gasket surface as shown in Figure 34 on page 22.
 - iii. View the side of the belt that contacts the pulley.

Figure 33

Figure 34

- d. Using the mark applied to the driver side (LH) front wheel for reference, slowly and carefully rotate the driver side (LH) front wheel one full turn in either direction to view all of the belt.
 - Holding the borescope (camera flexible tube) with one hand allows rotation of the wheel with the other hand (Figure 35).
 - If evidence of belt slip is identified as shown in Figure 44 through Figure 48 on pages 28-29, skip to step 26 on page 33.
 - If the belt does not move when rotating the driver side (LH) front wheel, return to step 18b on page 20.

Figure 35

e. If the inspection result confirms that no slippage has occurred on the observed side, inspect the other side of the belt as follows:

For the following steps print this page as a template and then shape the borescope camera flexible tube like the image in Figure 36.

- Do not shrink or enlarge the sheet size when printing.
- The template shown is • actual size when printed on 8.5" x 11" paper.

Figure 36

- i. Face the mirror of the borescope toward passenger side (engine side).
- ii. Insert the borescope in the second location where shown in Figure 37 and Figure 38.
- iii. Insert the lens approximately 8.7 inches from the CVT case rim as shown in Figure 39 on page 25.
- iv. View the side of the belt that contacts the pulley.

Figure 38

Figure 39

- f. Using the mark applied to the driver side (LH) front wheel for reference, slowly and carefully rotate the driver side (LH) front wheel one full turn in either direction to view all of the belt.
 - i. Holding the borescope (camera flexible tube) with one hand allows rotation of the wheel with the other hand (Figure 35).

HINT: If the belt does not move when rotating the driver side (LH) front wheel, supply additional air with hand pump (J-45664) to re-engage the clutch as necessary.

- ii. Look for evidence of belt slip as shown in Figure 44 through Figure 48 on pages 28 29.
- g. Is the inspection result OK (no evidence of slip) for 360° rotation of both sides of the belt?

YES: Go to step 18 on page 30.

NO: Skip to step 26 on page 33.

Figure 40

Figure 41

Figure 42

Figure 43

Figure 44

Figure 45

Figure 46

Figure 47

Figure 48

Pulse Rotor Inspection

- 18. Check for looseness in the pulse rotor using special tools Pulse Rotor Lock J-52728 and Wheel Lug Torque Adapter Set J-52729.
 - a. Remove the secondary speed sensor. Refer to the Electronic Service Manual (ESM), section TM Transaxle & Transmission > CVT:RE0F11A > Removal and Installation > Secondary Speed Sensor.
 - Remove the O-ring from the secondary speed sensor. The Oring is a one-time use part. Do not reuse.

Figure 49

- b. Install the Pulse Rotor Lock Tool J-52728 into the secondary speed sensor hole and tighten the bolt to 5.9 N•m (0.60 kg-m, **52 in-lb.**)
- c. Using the Wheel Lug Torque Adapter Set J-52729-1 and an appropriate torque wrench, apply torque to the driver side (LH) front wheel (Figure 50).
- d. Smoothly apply a maximum torque of 25 N•m (2.5 kg-m, 18 ft-lbs) in a forward driving direction (Counter-clockwise at driver side (LH) front wheel).
 - A slight movement in the front wheel is considered normal due to gear lash.

Figure 50

- e. Was maximum torque 25 N•m (2.5 kg-m, **18 ft-lbs**) achieved without wheel spin in a forward direction?
 - **YES**: Continue to step f on page 31.
 - NO: Skip to step h on page 31.

- f. Smoothly apply a maximum torque of 25 N•m (2.5 kg-m, **18 ft-lbs**) in a reverse driving direction (Clockwise to the driver side (LH) front wheel).
 - A slight movement in the front wheel is considered normal due to gear lash.

Figure 51

- g. Was maximum torque 25 N•m (2.5 kg-m, **18 ft-lbs**) achieved without wheel spin in either direction?
 - **YES**: Skip to step 19 on page 32.
 - **NO:** Continue to step h.
- h. If the driver side (LH) front wheel spins in either direction, check the following:
 - Ensure the passenger side (RH) front wheel is not moving when applying torque as referenced in step d on page 30 and step f on page 31.
 - If the passenger side (RH) front wheel is moving, check that the strap securing the passenger side (RH) front wheel is secure.
 - If the CVT belt is NOT moving while the wheel spins return to step 18b on page 20 and verify the clutch engagement tool is at 30 PSI.
- i. If the driver side (LH) front wheel still spins in either direction after checking all of the possible causes in step h, a loose pulse rotor is confirmed. Skip to step 26 on page 33.

No Belt Damage and Pulse Rotor Not Loose – Replace Control Valve

19. Remove the Pulse Rotor Lock Tool J-52728 if previously installed.

20. Reinstall the secondary speed sensor if previously removed.

- Refer to the Electronic Service Manual (ESM), section TM Transaxle & Transmission > CVT:RE0F11A > Removal and Installation > Secondary Speed Sensor.
- The secondary speed sensor O-ring is a one-time use part. Do not reuse. HINT: See Reference # 19 in the KIT PARTS REFERENCE TABLE.
- 21. Remove the Clutch Engagement Tool J-52273 from the CVT.

CAUTION To avoid the risk of minor personal injury, place a rag over the Clutch Engagement tool and SLOWLY loosen the two bolts until the audible depressurization is noted. The remaining CVT fluid may spray when the Clutch Engagement Tool is removed.

22. Install a new control valve in the reverse order of disassembly:

- Refer to steps 163 174 on pages 91 93.
- 23. Connect both battery cables, negative cable last.

24. Reset/reinitialize systems as needed.

- Refer to the ESM, section **PG Power Supply & Ground Elements**, for a listing of systems that require reset/initialization after reconnecting the 12V battery.
- Look in the PG section index for ADDITIONAL SERVICE WHEN REMOVING BATTERY NEGATIVE TERMINAL.
- This list often includes items such as radio, power windows, clock, sunroof, etc.
- 25. Perform Additional Service When Replacing Control Valve or Transaxle Assembly starting on page 106.

Belt Damaged or Pulse Rotor Loose

- 26. Remove the Pulse Rotor Lock Tool (J-52728) if previously installed.
- 27. Remove the Clutch Engagement Tool (J-52273) from the CVT.

ACAUTION To avoid the risk of minor personal injury, place a rag over the Clutch Engagement tool and SLOWLY loosen the two bolts until the audible depressurization is noted. The remaining CVT fluid may spray when the Clutch Engagement Tool is removed.

28. Install the original (removed) oil pan gasket and oil pan temporarily with at least two oil pan bolts, hand tight.

IMPORTANT: DO NOT discard the remaining oil pan bolts. These bolts will be reused.

29. Continue to step 30.

Remove CVT from the Vehicle and Disassemble External Parts

30. Remove the CVT from the vehicle.

- Refer to NTB18-061 for CVT removal.
- 31. Remove the torque converter and set aside.
 - The torque converter may be reused if CVT replacement is not required.
- 32. Put the CVT assembly on a work bench with the oil pan side down.

ACAUTION

• To avoid minor personal injury, use assistance when placing the CVT on the work bench.

NOTICE

- Use care when placing the CVT on the work bench to avoid damage to the oil pan or internal CVT components.
- 33. Drain the CVT fluid out of the torque converter.

Figure 52

Figure 53

- 34. Remove the output speed sensor, primary speed sensor and secondary speed sensor from the CVT (Figure 54, Figure 55 and Figure 56).
 - These sensors will be reused.
 - Inspect all three sensors for debris on the magnet and clean as necessary.

Figure 57

Remove the Fluid Filter

- 36. Remove the fluid filter from the CVT case as follows:
 - a. Remove the fluid filter cover bolt.
 - This bolt will be reused.

Figure 58

- B. Rotate the fluid filter cover counterclockwise approximately 15 degrees or until the cover clears the side cover tab.
- c. Pull the fluid filter cover away from the CVT case to remove.

Figure 59

- 37. Pull the fluid filter with grommet away from the CVT case to remove.
 - The filter is a one-time use part. Do not reuse.

NOTE: The grommet may separate from the filter and remain on the CVT case.

Figure 61

- 38. Remove the O-ring from the fluid filter cover.
 - The O-ring is a one-time use part. Do not reuse.

Figure 62

- 39. Thoroughly wipe and clean the inside of the fluid filter cover.
 - Brake cleaner may be used during this step to thoroughly remove any residual material.

Figure 63

40. Thoroughly wipe and clean the filter bore of the CVT case.

Figure 64

Remove the Oil Pan and Torque Converter Housing

- 41. Reposition the CVT assembly on the work bench with the torque converter housing side facing up.
 - Use plastic or wood blocks to stabilize the CVT assembly on the work bench if needed.

NOTE: CVT fluid will drain from the CVT case when the oil pan is removed.

- 42. Remove the oil pan and oil pan gasket which were installed to the CVT temporarily. **Bolts will be reused**.
 - Keep the original oil pan for installation during reassembly.
- 43. Remove the nineteen (19) bolts circled in yellow shown in Figure 66 from the torque converter housing.
 - Do not discard these bolts. They will be temporarily re-used later in this procedure. **NOTE:** The bolts that are not visible in Figure 66 are indicated with a dotted yellow circle.

Figure 66

44. Remove the torque converter housing from the CVT case.

- If necessary, use a Slide Hammer J-25721-A at the three locations (highlighted in green) shown in Figure 66.
- The input shaft thrust bearing washer may be attached to the torque converter housing, remove it and put it aside; it will be reused.

Remove the Oil Seals from the Torque Converter Housing

- 45. Remove the torque converter oil seal from the torque converter housing with a suitable tool.
 - Take care not to damage the seal-to-case surface when removing seal.
 - The torque converter oil seal is a one-time use part. Do not reuse.
- 46. Remove the differential side oil seal from the torque converter housing with a suitable tool.
 - The differential side oil seal is a one-time use part. Do not reuse.

Figure 67

Remove the CVT Internal Components

47. Remove the final drive assembly and the reduction gear assembly at the same time by lifting both straight up.

48. Remove the lip seal from the CVT case.

• The lip seal is a one-time use part. Do not reuse.

Figure 69

49. Remove the O-ring from the CVT case.

• The O-ring is a one-time use part. Do not reuse.

Figure 70

- 50. Remove the O-ring from the input shaft.
 - The O-ring is a one-time use part. Do not reuse.
- 51. Remove the thrust bearing from the drive sprocket and set aside to reuse during reassembly.

NOTE: The thrust washer for the thrust bearing may either be on the drive sprocket or may have remained with the torque converter housing when it was removed.

• The thrust washer will be reused later in this procedure.

Figure 71

52. Spread the snap ring shown in Figure 72 and Figure 73 then remove both sprockets and the chain.

Figure 72

Figure 73

- 53. Remove the parking rod from the detent plate.
 - Rotate the parking rod vertically to align the tab on the parking rod (Figure 75) with the slot on the detent plate and then separate from the detent plate.

Figure 74

Figure 75

- 54. Remove the two (2) bolts shown in Figure 76 and then remove the reverse brake tube from the CVT.
 - Do not discard. These will be reused during assembly.

Figure 76

- 55. Remove the sleeve from the reverse brake tube.
 - The sleeve is a one-time use part. Do not reuse.

Figure 77

- 56. Remove the six (6) bolts shown in Figure 78 and then remove the chain cover.
 - Do not discard. The bolts and chain cover will be reused during assembly.

Figure 78

- 57. Remove the input shaft assembly and the oil pump cover (dummy cover) from the CVT as a unit.
 - Hold the input shaft assembly by the end, as shown in Figure 79, and pull straight up to remove.

HINT: The dummy cover, shaft and bearing will separate if the input shaft is not held at the end.

- 58. Confirm the "type" of bearing used on the end of the input shaft, and then proceed to the indicated step.
 - For type "A" roller bearing proceed to step 59.
 - For type "**B**" ball bearing skip to step 61 on page 45.
 - For type "C" sealed ball bearing skip to step 61 on page 45.

59. Remove the outer race of the roller bearing from the counter bearing bore of the CVT case by hand.

NOTICE Do not use excessive force to remove the bearing race as damage to the CVT may occur. A magnet can be used to lift this bearing if needed.

HINT: The outer race of the roller bearing might remain on the shaft when removing the input shaft and dummy cover.

Figure 81

- 60. Inspect type "**A**" bearing (Roller bearing) as follows:
 - Inspect the bearing outer race and input shaft for flaking or pitting.
 - Install the bearing outer race onto the input shaft assembly with the "bearing number" facing the gear, and then rotate the bearing while applying an axial load by hand to check for any abnormality.

Figure 82

NOTICE DO NOT drop the outer race of the bearing to avoid damage and/or contamination.

- > Were any abnormalities found or felt in the bearing (sound, flat spots, flaking)?
 - **NO:** Put bearing and shaft aside and then skip to step 62 on page 45.
 - **YES**:
 - a. Document the abnormalities found with a video and then contact the PCC for authorization to replace the CVT. See page 147 for PCC contact information.
 - b. Refer to steps 203 206 on page 105 when replacing the CVT.
 - c. After CVT replacement, perform **ADDITIONAL SERVICE WHEN REPLACING CONTROL VALVE OR TRANSAXLE ASSEMBLY** on page 106.
 - d. Loosely reassemble the original CVT in the reverse order of disassembly with the original parts.

- 61. Inspect type "**B**" and type "**C**" bearings (ball bearing) as follows:
 - Apply an axial load and rotate the bearing by hand to check for any abnormality (sound, flat spot, flaking).

Figure 83

- Were any abnormalities observed in the bearing when applying an axial load (sound, flat spots, flaking)?
 - NO: Proceed to step 62.
 - **YES:**
 - a. Document the abnormalities found with a video and then contact the PCC for authorization to replace the CVT. See page 147 for PCC contact information.
 - b. Loosely re-assemble the CVT in the reverse order of disassembly with the original parts.
 - c. Refer to steps 203 206 on page 105 when installing the CVT.
 - d. After CVT replacement, perform ADDITIONAL SERVICE WHEN REPLACING CONTROL VALVE OR TRANSAXLE ASSEMBLY on page 106.
- 62. If the bearing is judged to be OK, remove the shim (Figure 84) from the bottom of the counter bearing bore.
 - A magnet can be used to remove the shim if needed.
 - This shim will be reused later in this procedure.

Figure 84

- 63. Remove the differential side oil seal from the CVT case by driving it away from the case with a suitable tool.
 - The differential side oil seal is a onetime use part. Do not reuse.
 - Take care not to damage the seal-to-case surface when removing seal.

64. Rotate the manual shaft (Figure 86) until it stops in the Park position (see Figure 87).

NOTICE Confirm that the detent plate is in the Park position before proceeding. <u>Do not</u> remove the roll pin in any other position. This will allow pin removal and avoid damage to the case.

- 65. Remove the roll pin completely from the manual shaft with a 3 mm punch.
 - The roll pin is a one-time use part. Do not reuse.

NOTICE Use a 3 mm punch. If a larger sized punch is used, the hole may become enlarged and damage the manual shaft.

- 66. Remove the detent spring bolt shown in Figure 87 and then remove the detent spring from the CVT case.
 - Do not discard the bolt. It will be reused during reassembly.

Figure 86

Figure 87

- 67. Remove the manual shaft retaining pin (straight pin) from the CVT case by grasping and pulling vertically by hand.
 - Do not discard the pin. It will be reused during reassembly.

Figure 88

- 68. Remove the two (2) bolts shown in Figure 89 for the transmission range switch.
 - Do not discard the bolts. They will be reused during reassembly.

HINT:

- DO NOT remove the manual shaft lock nut at this step.
- DO NOT try to remove the transmission range switch from the manual shaft.

Transmission range Figure 89 switch

69. Slide the manual shaft approximately 5.3 inches (135 mm) out of the CVT case to allow removal of the oil pump (step 70).

NOTICE

<u>Do not</u> remove the manual shaft completely from the CVT case. If the retaining pin slot contacts the seal, damage may occur.

Figure 91

- 70. Remove the three (3) Allen® bolts shown in Figure 91 and then remove the oil pump from the CVT case.
 - This oil pump will not be reused, it will be replaced with a new one.
 - Do not discard Allen® bolts. They will be reused during reassembly.

71. Remove the snap ring from the original oil pump.

HINT: <u>DO NOT</u> discard the removed snap ring. This snap ring will be reused.

Figure 92

- 72. Remove the oil pump gasket from the CVT case.
 - The oil pump gasket is a one-time use part. Do not reuse.

Figure 93

- 73. Temporarily install the transmission range switch with the two (2) original bolts removed in step 68 on page 47, finger tight.
 - The transmission range switch will be permanently installed later in this procedure.

Remove the Sub-assembly

IMPORTANT: Steps 74 through 81 are **ONLY** to separate the sealant of the side cover.

The sub-assembly with belt and pulley <u>**CANNOT**</u> be removed from the CVT while in this orientation and will be removed from the case at a later step.

74. Reposition the CVT on the work bench with the torque converter housing side down.

HINT: A wood block may be used to stabilize the CVT during disassembly/reassembly.

Figure 94

- 75. Remove the two (2) pulley bearing retainer bolts shown in Figure 95.
 - Do not discard bolts. They will be temporarily installed during a later step.

Figure 95

Figure 96

- 76. Remove the eleven (11) side cover bolts shown in Figure 96.
 - Retain two (2) of these bolts. They will be temporarily installed during a later step.

- 77. Remove the side cover with a slide hammer J-25721-A to separate the side cover and CVT case.
 - There are three slide hammer tool points shown in Figure 97.
 - The mating surfaces will be cleaned at a later step.
 - This step will help with sub-assembly removal at a later step.

NOTICE

- To avoid damage to the CVT, do not use the speed sensor bore for slide hammer tool location.
- > Do not pry the surfaces apart as internal CVT damage may result.

78. Align the primary pulley bearing retainer bolt holes with the bolt hole on the case as shown in Figure 98.

HINT: This helps alignment of the bearing retainer bolt threads after reinstalling the original side cover.

Figure 98

- 79. Install one of the "Assembly Guide Pins, Pulley Bracket" (Guide Pin J-52272) to one of the two pulley bearing retainer bolt holes.
 - This will assist in installation of the original side cover to the pulley assembly.

Figure 99

- 80. Place the original side cover onto the CVT case.
 - Position the primary pulley bearing retainer to allow the guide pin to be inserted through the bolt hole of the side cover.

Figure 100

81. Install the two (2) original pulley bearing retainer bolts (Figure 101) as follows:

- Use the original bolts and O-rings at this step.
 - a. Install one pulley bearing retainer bolt finger tight into open bearing retainer bolt hole.
 - b. Remove the guide pin from the other bearing retainer bolt hole.
 - c. Install the other bearing retainer bolt by hand (finger tight).
- 82. Temporarily reattach the removed side cover onto the CVT case with two (2) original bolts on opposite corners, hand tight.

Figure 101

83. Reposition the CVT with the side cover facing down.

Figure 102

84. Remove the two (2) side cover bolts which were temporarily installed to hold the side cover to the CVT in step 82 on page 53.

HINT: Only one (1) bolt is shown in Figure 103 and is for reference only.

Figure 103

- 85. Lift the CVT case vertically off of the sub-assembly and side cover.
 - Weight 17.4 kg (**38.4 lbs.**)
 - This sub-assembly will not be reused.

IMPORTANT: The sub-assembly <u>must</u> <u>be</u> separated from the case as shown in Figure 104.

Figure 104

86. Place the CVT case on the work bench with the torque converter side facing down.

Figure 105

- 87. Remove the lubrication tube bolt shown in Figure 106 and then remove the lubrication tube from the CVT case.
 - Do not discard the bolt or lubrication tube. These will be reused during reassembly.

NOTICE To prevent drivability concerns, ensure that the lubrication tube is not bent during sub-assembly installation.

Figure 106

Clean the CVT Surfaces

NOTICE To avoid damage to the CVT and potential drivability concerns:

- Prevent any debris from dropping into the torque converter housing, side cover or the CVT case.
- Use brake cleaner to remove the remaining CVT fluid and any residual sealant.
- Do not use sanding discs, abrasive tools, or metal blades on sealing surfaces.
- Clean dowel pins with a mild abrasive sandpaper to remove all rust and debris.
 - This will assist at a later step when mating the CVT case to the sub-assembly and again when mating the CVT case to the torque converter housing.
- 88. Remove any sealant that remains on the sealing surface of the CVT case where it seals with the sub-assembly side cover.
 - A plastic scraper can be used.
 - Use <u>ONLY</u> brake cleaner to clean surfaces.
 - Clean with a lint-free paper towel.

Figure 107

- 89. Remove any sealant that remains on the sealing surfaces of the torque converter housing and CVT case using a plastic scraper, and then clean with a lint-free paper towel.
 - Use ONLY brake cleaner to clean surfaces.

Figure 109

Clean Oil Passages in CVT Case and Oil Pump Cover

In the following steps:

Brake cleaner and compressed air will be used to clean out oil passages in the CVT assembly.

ACAUTION

- To avoid the risk of minor personal injury, wear eye/face protection when using compressed air and cleaning fluids.
- To avoid risk of minor personal injury, regulate air pressure up to a maximum of 75 PSI.
- 90. Confirm the CVT case is on the work bench with sub-assembly side down.
 - Use wood blocks as necessary to stabilize the assembly during these steps.

NOTICE Make sure the surface of the work bench has been cleaned to avoid contamination of components.

Figure 110

91. Spray brake cleaner into each oil passage of the CVT case, where shown in Figure 111 and Figure 112 with yellow circles, until the fluid runs clear for 5 seconds.

NOTICE To avoid damage to the CVT and potential drivability concerns, do not apply brake cleaner or compressed air to passages shown in red.

92. Apply compressed air in the same passages to remove remaining brake cleaner and debris.

ACAUTION To avoid the risk of minor personal injury, do not stand in front of the passages while using compressed air.

Figure 111

Figure 112

- 93. Spray brake cleaner into the reverse brake tube.
 - Apply compressed air in the same passages to remove remaining cleaner and debris.

Figure 113

94. Clean the input shaft bearing bore area (Figure 114 and Figure 115).

Figure 114

Figure 115

95. Spray brake cleaner into the high clutch fluid passage on the torque converter housing.

ACAUTION

- To avoid the risk of minor personal injury, take care when cleaning passages as brake cleaner will exit the passage shown as "fluid discharge" in Figure 116.
- Apply compressed air in the same passages to remove the remaining cleaner and debris.

Figure 116

96. Spray brake cleaner into the reduction gear bearing fluid passage on the torque converter housing. Then apply compressed air in the same passages to remove remaining cleaner and debris.

ACAUTION

 To avoid the risk of minor personal injury, do not face the passage indicated in red of Figure 117 when cleaning passages as brake cleaner will exit the passage.

Figure 117

- 97. Clean the passages of the oil pump cover as follows:
 - a. Remove the input shaft from the oil pump cover.

NOTICE

Do not drop the counter bearing outer race (roller bearing type only) as damage or contamination could occur.

Figure 118

- b. Note the orientation and then remove the thrust bearing.
 - Do NOT discard. This will be reused at a later step.

Figure 119

- c. Remove the washer.
 - Do NOT discard. This will be reused at a later step.
- d. Spray brake cleaner into the oil pump cover oil passages indicated in yellow shown in Figure 121.
- e. Apply compressed air in the same passages to remove the remaining cleaner and debris.

Figure 120

ACAUTION

To avoid the risk of minor personal injury, do not face the passage indicated in white in Figure 121 and Figure 122 while cleaning.

Figure 121

f. Install the original washer.

HINT:

- Orientation is NOT critical for the washer.
- Apply petroleum jelly to the washer to hold it in place during assembly.

Figure 123

- g. Install the original thrust bearing in the correct orientation as shown in Figure 124 and Figure 125.
 - Apply petroleum jelly or equivalent to hold in place.

NOTICE

The thrust washer is direction specific. Install in the correct orientation. If the thrust washer is incorrectly installed, damage to the CVT may occur.

Figure 125

h. Insert the input shaft into the oil pump cover (Figure 126 and Figure 127).

IMPORTANT:

- Apply petroleum jelly to the sealing ring on the input shaft before installation.
 - > The sealing ring is hidden behind the input gear in Figure 126.
- Make sure all exposed internal areas of the CVT (including the oil pan and magnets) have been thoroughly cleaned.

NOTICE

- To avoid damage to the CVT, use care while assembling the input shaft to the oil pump cover as the input shaft sealing ring may become damaged.
- To avoid damage to the CVT when not being worked on, cover all parts with a lint-free covering to prevent contamination.

Measuring the CVT Sub-assembly Case Depth

- 98. Temporarily install the torque converter housing to the CVT case with two (2) bolts at opposite corners, hand tight (Figure 128).
 - Use the original bolts to secure.

Figure 128

- 99. Reposition the CVT on the work bench with the torque converter housing side facing down (Figure 129).
- 100. Clean and then zero the Digital Depth Gauge J-50272.
- 101. Set the digital gauge to millimeters.

Figure 129

102. Clean the Gauge Block J-50271.

HINT: If Gauge Block J-50271 is not used, the thickness of the substitute measuring bar (measurement "**X**") will need to be measured. (Figure 133, page 64). This can be done either with a set of calipers or with Digital Depth Gauge J-50272.

- 103. Confirm the sealing surfaces of the CVT case are clean.
- 104. Place Gauge Block J-50271 across the sub-assembly sealing surface as shown in Figure 130.

Figure 130

105. Measure the average distance (**Y**) shown in Figure 133 as follows:

- Refer to Figure 131, Figure 132 and Figure 133, then proceed to page 65.
- Measure only from areas that do not have any signs of contact.
- Refer to "Measuring area" referenced in green to measure "Y".

 \mathbf{Y} = The distance between the upper surface of the Gauge Block J-50271 and the surface where the snap ring seats.

Figure 133

Proceed to the next page.

Figure 134

Figure 135

a. Measure between the top of the Gauge Block (J-50271) to where the snap ring on the secondary pulley bearing seats in three (3) locations to calculate an average for measurement "**Y**" (Figure 134 and Figure 135).

b. Calculate the average for "Y" with the formula below and then record it below.

$$\mathbf{Y} = \frac{(Y1+Y2+Y3)}{3}$$
 (millimeter)

c. Calculate case depth "D" as follows:

IMPORTANT: Essential tool Gauge Block (J-50271) is **20 mm** thick.

- Average depth calculated in step $103b \rightarrow Y$
- Subtract the Gauge Block thickness → − X_____
- Calculated depth \rightarrow = D_____
- **D** = Distance between the sub-assembly sealing surface and the secondary pulley front bearing surface with the snap ring attached.

EXAMPLE:

Y = 61.39 mm- X = 20.00 mm D = 41.39 mm

New Snap Ring Selection and Installation to the New Sub-assembly

106. Remove the top of the shipping box of the new sub-assembly.

HINT: The outer cardboard of the shipping box can be disassembled for easy removal of the sub-assembly by removing the shipping tape.

- 107. Remove the upper board with foam spacer assembly.
 - The packing material may be different then what is shown in Figure 137.

- 108. Locate the data sheet in the shipping box and place it in a safe place.
 - This data sheet is required for snap ring selection in the following steps.

- 109. Locate the plastic bag which contains the snap rings (Figure 139).
 - There are six individual snap rings in the plastic bag.
 - Take the plastic bag out of the shipping box, and put aside on the work bench.

HINT: See Reference # 5 in the KIT PARTS REFERENCE TABLE.

Figure 139

110. Take the new sub-assembly out of the shipping box and place it on the work bench.

NOTICE To avoid possible damage to the CVT:

- Hold the sub-assembly by the side cover ONLY when removing it from the shipping box.
- DO NOT handle the belt or pulleys of the sub-assembly when removing from the shipping box.
- DO NOT BREAK the foam cushion in the shipping box. This will be used as a stabilizer for the sub-assembly during the repair.

HINT: See Reference # 4 in the **KIT PARTS REFERENCE TABLE**.

Figure 140

111. Take the lower board with foam cushion (lower board) out of the shipping box shown in Figure 142.

HINT: Step 112 is for kits that have a separate spacer (Figure 141). In later kits this spacer will be part of the lower board and step 112 will not be used.

112. Take the spacer (Figure 141) out of the shipping box and place on the work bench where the sub-assembly will be installed, and then place the lower board on top of the spacer as shown in Figure 142.

HINT: The spacer will be the last item that is removed from the shipping box and is approximately 1 inch thick.

Figure 141

- Position the lower board so that it hangs over the spacer.
- Align the lower board so that the left and the right cut-outs are even with the spacer.

NOTE: The positioning of the lower board with foam cushion will allow the CVT case enough clearance from the work bench to allow it to seat flush with the sub-assembly.

- 113. Remove the sub-assembly from the plastic bag.
- 114. Place the new sub-assembly onto the lower board.
 - The sub-assembly must be level and oriented as shown in Figure 143 for proper seating of the CVT case later in this procedure.

- 115. Remove the snap ring from the secondary pulley front bearing of the new sub-assembly.
 - A new snap ring will be installed later in the procedure.

Figure 144

116. Calculate "E" for snap ring selection as follows:

HINT: For the value of **"B1"**, refer to the data sheet that was put aside when the subassembly shipping box was opened.

•	Calculated case depth from step c on page 65	→ D
•	Subtract constant value	→ — 41.30
•	Subtotal	→ =
•	Add value for " B1 " from data sheet	→ +B1
•	Total calculated depth	→ = E

E = This will be used to select a snap ring from **Table A** on page 71.

EXAMPLE:

 If
 D
 = 41.39 mm

 Constant
 = 41.30 mm (subtracted)

 And
 B1 = 1.56 mm (added)

E = 1.65 mm

117. Select the appropriate Part Number from Table A shown below, based on the calculated result of "**E**" in step 116 on page 70.

EXAMPLE: If **E** = **1.65**, and is between or equal to **1.64 to 1.67**, choose new snap ring Part Number "**31506 3JX9C**".

	E (MM)		/)	PART NUMBER	SNAP RING REFER	ENCE (MM)
	1.55	to	1.59	31506 3JX9A	1.61	
	1 60	to	1.63	31506 3 IX9B	1.65	Example only. <u>Do</u>
<	1.64	to	1.67	31506 3JX9C	▶ 1.69 🦯	not use in your
	1.68	to	1.71	31500 SJX9D	1.73	calculations.
	1.72	to	1.75	31506 3JX9E	1.77	
	1.76	to	1.76	31506 3JX8A	1.79	

Table A

E (MM)			PART NUMBER	SNAP RING REFERENCE (MM)		
1.55	to	1.59	31506 3JX9A	1.61		
1.60	to	1.63	31506 3JX9B	1.65		
1.64	to	1.67	31506 3JX9C	1.69		
1.68	to	1.71	31506 3JX9D	1.73		
1.72	to	1.75	31506 3JX9E	1.77		
1.76	to	1.76	31506 3JX8A	1.79		

118. Open the plastic bag (with snap rings) that was removed from the shipping box in step 109 on page 67 and then choose the correct Part Number selected from Table A.

HINT: There are six individually packed snap rings in the plastic bag. See Reference # 5 in the **KIT PARTS REFERENCE TABLE**.

- 119. Measure the new snap ring and confirm its thickness is equal to the Snap Ring Reference in Table A.
- 120. Install the selected snap ring onto the secondary pulley front bearing of the new subassembly.

HINT: Discard unused snap rings.

Figure 145

Figure 146

- 121. Make sure the CVT case sealing surface of the side cover is thoroughly cleaned.
- 122. Make sure the dowel pins are cleaned and any rust has been removed.

Figure 147

123. Flip the CVT case over on the work bench with the torque converter housing side facing up.

NOTICE To avoid possible contamination and damage to the CVT, ensure the work bench surface is thoroughly cleaned before flipping the CVT case.

124. Remove the two (2) temporary bolts and then remove the torque converter housing from the CVT case.

Figure 148

125. Install the CVT case onto the new subassembly as follows:

NOTE: Sealant will be applied between these components at a later step.

a. Slowly lower the CVT case onto the sub-assembly.

NOTICE To avoid damage to the CVT:

- Only use the weight of the CVT case when installing it to the sub-assembly.
- <u>Do NOT</u> use any other external force to seat the CVT case to the sub-assembly.
- b. Align the primary pulley front bearing bore of the CVT case to the primary pulley front bearing of the subassembly.

HINT: Figure 150 is shown looking down into the CVT case while it is being lowered.

c. Align one of two dowel pin holes found on the CVT case to the sub-assembly.

Figure 150

d. Align the second dowel pin of the sub-assembly with the hole on the opposite side of the CVT case and seat CVT case.

- e. If the CVT case will not seat on the sub-assembly:
 - 1) Access the counter driven gear through the top of the CVT case,

and

2) Rotate the counter driven gear on the primary pulley back and forth.

HINT: This will allow the splines of the secondary pulley and the planetary carrier plate to align. See Figure 154.

Figure 154

- f. Confirm that the mating surface of the CVT case is seated to the sub-assembly completely.
 - If the CVT case does not sit completely flush with the sub-assembly, DO NOT apply any vertical force to seat it.
 - 1) If this occurs, first lift the CVT case up slightly and then lower.
 - 2) Repeat until the CVT case and sub-assembly sit flush with each other.

Figure 155

g. Rotate the counter driven gear back and forth by hand to confirm its rotation is smooth.

126. Temporarily install two (2) original bolts hand tight to hold the sub-assembly to the CVT case.

Figure 156

Figure 157

- 127. Lift the sub-assembly / CVT case away from the cradle and set aside. Discard the cradle.
 - Leave the sub-assembly side cover facing down as shown in Figure 160.
 - Weight: 29 kg (**64 lbs.**)

- 128. Install the oil pump gasket to the CVT case.
 - Use a new gasket (non-reusable).
 - Apply CVT fluid before installation.

HINT: See Reference # 14 in the KIT PARTS REFERENCE TABLE.

129. Remove the hand tight transmission range switch bolts and then slide the manual shaft out only far enough to install the oil pump. See Figure 90 on page 48.

Figure 159

Figure 160

Figure 161

NOTICE

• <u>Do not</u> remove the manual shaft completely from the CVT case. If the retaining pin slot contacts the seal, damage may occur.

130. Install a new oil pump to the CVT case.

- Reuse the three original Allen® bolts for the oil pump.
- 35 mm (**1.4 inches**) long bolt.
 - Bolt torque:
 20.3 N•m (2.1 kg-m, 15 ft-lbs.)

HINT: See Reference # 13 in the KIT PARTS REFERENCE TABLE.

131. Install the snap ring that came out of the original oil pump to the new oil pump. 132. Slide the manual shaft back to the original position.

Figure 162

- 133. Install the original retaining pin as shown in Figure 163.
 - Align the manual shaft groove (Figure 164) to allow the retaining pin (Figure 163) to go through completely.

Figure 163

NOTICE

To prevent CVT operational issues, use care when assembling the manual shaft and detent plate.

- > <u>Do not</u> drive the roll pin flush with the detent plate.
- If the roll pin is driven flush, it will be overextended on the opposite side and the manual shaft/detent plate assembly <u>will not</u> rotate.
- The roll pin <u>MUST be</u> the same length on both sides of the detent plate after it is installed through the detent plate and manual shaft.
- 134. Install the new roll pin through the detent plate and manual shaft.
 - The roll pin must be inserted through the detent plate so that both ends are the same length.
 - Use a new roll pin (non-reusable).
 - Punch size: Diameter 3 mm, Length 20 mm or longer.

NOTICE Use the appropriate size punch to prevent damage to the roll pin or detent plate.

HINT: See Reference # 12 in the KIT PARTS REFERENCE TABLE.

Figure 165

135. Install the original manual shaft detent spring to the CVT case.

IMPORTANT: Locate the tab of the detent spring to the hole of the CVT case.

- 16 mm (**0.6 inches**) long bolt.
 - Bolt torque:
 6.8 N•m (0.70 kg-m, 60 in-lbs.)

Figure 166

- 136. Install the original shim for the input shaft in the counter bearing bore (Figure 167).
 - If the counter bearing is a type "A" (roller bearing) continue to step 137 on page 81.
 - If the counter bearing is a type "B" or "C" (ball bearing) skip to step 139 on page 81.

Figure 167

NOTE: Type "**C**" counter bearing shown in Figure 168. Type "**B**" is similar.

Figure 168

137. For type "**A**" bearings, install the outer race of the roller bearing to the counter bearing bore of the CVT case, if it has not been done already.

IMPORTANT: Apply CVT Fluid to the outer race of the roller bearing before installation.

Figure 169

Figure 170

- 138. If the input shaft assembly is, for any reason, separated into individual components, see steps 95f 95h on pages 61 62 to reassemble those parts, otherwise continue to step 139.
- 139. Install the input shaft assembly to the CVT case
 - Hold the tip of the input shaft so that the input shaft and the pump cover remain together.
 - Confirm that the oil pump cover seats onto the CVT case completely.

NOTICE <u>Do not</u> draw the input shaft assembly down to the case with the mounting bolts or damage to the CVT may occur.

Figure 171

- 140. Install the original chain cover and the six (6) original bolts and then tighten.
 - 16 mm (**0.6 inches**) long bolt 2 pieces.
 - Bolt torque:
 5.6 N•m (0.60 kg-m, 50 in-lbs.)
 - 30 mm (**1.2 inches**) long bolt 4 pieces.
 - Bolt torque:
 27.1 N•m (2.8 kg-m, 20 ft-lbs.)

Figure 172

- 141. Rotate the input shaft by hand to confirm that the shaft rotates freely.
- 142. Install the sleeve to the reverse brake tube.
 - Use a new sleeve (non-reusable).
 - Apply CVT Fluid to the sleeve before installation.

HINT: See Reference # 20 in the KIT PARTS REFERENCE TABLE.

Figure 173

- 143. Install the reverse brake tube to the CVT case.
 - 16 mm (**0.6 inches**) long bolt.
 - Bolt torque:
 5.6 N•m (0.60 kg-m, 50 in-lbs.)

NOTICE Insert the tube to the CVT case vertically and evenly to avoid damage to the sleeve.

 Reverse brake tube

 2 Bolts

 P170660

144. Connect the parking rod to the detent plate as shown in Figure 175.

Figure 175

- 145. Rotate the detent plate until the detent is in the "D" position (Figure 176 and Figure 177).
 - The detent roller position shall be on the second left concave of the detent plate.

Figure 176

Figure 177

- 146. Install the oil pump chain onto the oil pump sprocket and the drive sprocket and then lower onto the oil pump shaft (driven sprocket) (Figure 178 and Figure 179).
- 147. Expand the snap ring with a suitable tool, and then push down on the driven sprocket until it bottoms out.
- 148. Release the snap ring and then pull up on the driven sprocket until the snap ring locks into its groove.
- Priven sprockets and chain Sprockets and chain Intervention of the sprockets Sprockets and chain Intervention of the sprockets Snap ring Exprockets Snap ring

HINT: A click sound can be heard when the snap ring locks in place.

Figure 178

Figure 179

149. Install the original thrust bearing onto the drive sprocket.

HINT: Install the thrust bearing with the exposed bearings facing up.

Figure 180

- 150. Rotate the input shaft by hand to confirm that the chain, pump and shaft rotate freely.
- 151. Install the new O-ring onto the input shaft.
 - Use a new O-ring (non-reusable).
 - Apply CVT Fluid to the O-ring before installation.

HINT: See Reference # 7 in the KIT PARTS REFERENCE TABLE.

Figure 181

- 152. Install the CVT case O-ring (oval O-ring) to the CVT case.
 - Use a new oval O-ring (non-reusable).
 - Apply CVT Fluid to the O-ring before installation.

HINT: See Reference # 11 in the KIT PARTS REFERENCE TABLE.

153. Install the lip seal to the CVT case.

- Use a new lip seal.
- Apply CVT Fluid to the lip seal before installation.

HINT: See Reference # 10 in the KIT PARTS REFERENCE TABLE.

- 154. Confirm that both seals are seated in their grooves.
 - Use petroleum jelly to help hold the seals in place.
- 155. Replace the two machine cut seals (Ring Seals) of the reduction gear assembly, shown in Figure 184 and Figure 185 as follows:
 - a. Clean any debris out of the machined grooves that the two Ring Seals will be installed into.

Figure 182

Figure 183

NOTICE These seals are <u>VERY</u> delicate. Handle with care to avoid damage.

HINT: See Reference # 21 in the KIT PARTS REFERENCE TABLE.

• Machine cut seals can be ordered in packs of 50. See the part number in kit parts reference table.

Figure 185

- b. Pre-lube both machined grooves with CVT fluid.
- c. Slide the First Groove Seal Tool (#J-52595-1) over the reduction gear shaft.
- d. Confirm that it is completely seated.
- e. Pre-lube both Ring Seals with CVT fluid.
- f. Place one (1) Ring Seal onto the First Groove Seal Tool.
- g. Slide the Seal Driver (#J-52595-3) over the First Groove Seal Tool.
- h. Gently push the Ring Seal onto the first groove.
- i. Remove the First Groove Seal Tool.

Reduction gear assembly

Figure 186

Figure 187

Second Groove Seal Tool (#J-52595-2)

- j. Slide the Second Groove Seal Tool (#J-52595-2) over the reduction gear shaft.
 - Confirm that it is completely seated

- k. Place one (1) Ring Seal onto the Second Groove Seal Tool.
- I. Slide the Seal Driver (#J-52595-3) over the Second Groove Seal Tool.
- m. Gently push the ring seal onto the second groove.
- n. Remove the Second Groove Seal Tool.

• Confirm that both of the Ring Seals are not protruding in any direction.

HINT: If the reduction gear shaft is not going to be immediately installed, the Split Ring Seal Cover (#J-52595-4) can be slid over both ring seals to prevent damage.

NOTICE In the following step <u>use extreme care</u> when installing the final drive and reduction gear assembly to avoid damage to components/seals.

- The machine cut seals are <u>VERY</u> delicate and will damage easily if forced.
- The reduction gear assembly should seat without <u>any</u> additional force.
- If the reduction gear assembly does not seat, remove it and confirm that machine cut seals are in place and centered in their grooves.
- 156. Confirm that the thrust bearing is in place in the bottom of the reduction gear assembly bore.

- 157. Install the final drive and reduction gear assembly together into the CVT case.
 - If the reduction gear assembly does not seat, remove it and confirm that machine cut seals are in place and centered in their grooves.
- 158. Rotate the final drive by hand to confirm that it rotates freely.

Figure 191

Install the Torque Converter Housing

- 159. Place the original thrust washer on the torque converter housing.
 - Apply petroleum jelly to the mating surface side of the washer to hold the washer on the converter housing.

HINT: Both sides of the thrust washer are the same, orientation is not critical.

Figure 192

160. Remove any remaining CVT fluid on the sealing surfaces of the torque converter housing and the CVT case.

HINT: Brake cleaner is acceptable to remove remaining CVT fluid.

NOTICE To prevent possible CVT damage, prevent any debris from entering into the torque converter housing or the CVT case.

- 161. Apply sealant to the CVT case side of the torque converter housing to CVT case mating surface.
 - Sealant bead diameter: 2.0 mm

Sealant:

- Loctite 5460 (See the **PARTS INFORMATION** on page 140 of this bulletin)
- Color: Pink

IMPORTANT:

- Confirm that the mating surfaces are clean before applying sealant.
- Make sure that the starting point and the ending point of the sealant is between two bolt holes. Overlap both ends of the bead by 3 5 mm.
- If the Guide Pins were removed to clean the case surfaces, reinstall them now.

NOTICE Be careful not to contact or contaminate the sealant. If the sealant has been disturbed or contaminated in any way before case assembly, remove the sealant completely and re-apply to prevent possible leaks.

Figure 193

162. Install the torque converter housing onto the CVT case with nineteen (19) new bolts and torque to the following pattern shown in Figure 194.

NOTE: If the torque converter housing does not fully seat, the CVT may not be in Drive.

• Use new bolts.

HINT: See Reference # 9 in the KIT PARTS REFERENCE TABLE.

> Bolt torque: 27.1 N•m (2.8 kg-m, **20 ft-lbs**.)

IMPORTANT: Tighten the bolts in specific order shown below.

HINT: The bolts not visible in Figure 194 are indicated with a dotted green circle.

Figure 194

- 163. Rotate the CVT assembly so that the torque converter housing side is facing down.
- 164. Make sure that the terminal assembly is attached to the bracket of the new control valve (Figure 195).

HINT:

- Apply CVT Fluid to the O-ring of the terminal connector.
- See Reference # 1 in the **KIT PARTS REFERENCE**.

Figure 195

- 165. Install the new control valve assembly into the CVT case.
 - Insert the terminal assembly through the hole of the CVT case, and then push the new control valve horizontally with even pressure to seat the control valve completely.

HINT: A clicking sound may be heard as the new control valve is seated to the CVT case.

Figure 196

166. First tighten all eleven (11) original control valve bolts circled in yellow finger tight by hand, and then tighten to the specified bolt torque below.

NOTICE These bolts are easily stripped. Use care to not over-torque as this can damage the CVT.

- 87 mm (3.4 inches) long bolt.
 11 pieces
 - Bolt torque:
 7.9 N•m, (0.80 kg-m, 70 inlbs.)

HINT: The manual valve may slide down and interfere with CVT case.

- 167. Install the original manual plate to the manual shaft with the original spring washer and lock nut.
 - Use an adjustable wrench on the transmission range switch side of the manual rod to keep the shaft from rotating while tightening.
 - Nut torque:
 21.7 N•m (2.2 kg-m, 16 ft-lbs.)

- 168. Confirm that the new O-ring is on the new oil strainer.
 - Apply CVT Fluid to the O-ring before installation.

HINT:

- The new oil strainer comes with a new O-ring.
- See Reference # 3 in the KIT PARTS REFERENCE TABLE.

Figure 199

- 169. Install the new oil strainer to the control valve with the three (3) original bolts.
 - 12 mm (**0.5 inches**) long bolt, 3 pieces
 - Bolt torque:
 7.9 N•m (0.80 kg-m, **70 in-lbs.**)

Figure 200

170. Remove the magnets from the CVT oil pan.

HINT: The CVT oil pan may come with two (2) or three (3) magnets.

- 171. Clean the magnets.
- 172. Clean the CVT oil pan.
- 173. Reinstall the magnets to the CVT oil pan in their original positions.
- 174. Install the CVT oil pan with a new oil pan gasket using the original bolts.
 - Bolt torque:
 5.6 N•m (0.60 kg-m, 50 in-lbs.)

HINT: See Reference # 2 in the KIT PARTS REFERENCE TABLE.

Figure 201

Seal the Sub-assembly Cover

- 175. Confirm the torque converter housing side is facing down.
- 176. Remove the two temporary side cover bolts.

Figure 202

- 177. Remove the two pulley bearing retainer bolts.
 - These bolts will be reused later in this procedure.

Figure 203

178. Remove the side cover.

- Use a slide hammer (J-25721-A) if needed.
- There are three slide hammer tool locations on the side cover.

HINT: Figure 204 shown with side cover removed.

Figure 204

- 179. Install the original lubrication tube into the CVT case.
 - Place the fluid jet nozzle under the CVT belt and then insert the lubrication tube into the CVT case.

NOTICE To avoid damage to the CVT belt, take care not to contact the CVT belt with any tools during tube installation.

Figure 205

180. Install the original lubrication tube bolt.

- 16 mm (**0.6 inches**) long bolt.
 - Bolt torque:
 6.8 N•m (0.70 kg-m, 60 in-lb).

Figure 206

181. Apply sealant to the side cover sealing surface of the CVT case.

• Sealant bead diameter: 2.0 mm

Sealant:

- Loctite 5460 (See the **PARTS INFORMATION** on page 140 of this bulletin)
- Color: Pink

IMPORTANT:

- Confirm that the mating surfaces are clean before applying sealant.
- Make sure that the starting point and the ending point of the sealant is between two bolt holes. Overlap both ends of the bead by 3 5 mm.

NOTICE Be careful not to contact or contaminate the sealant. If the sealant has been disturbed or contaminated in any way before side cover assembly is installed, remove the sealant completely and reapply to prevent possible leaks.

Figure 207

- 182. Screw in Guide Pin (J-52272) to either one of the two female bolt threads of the pulley bearing retainer.
 - Place the guide pin next to the case bolt hole as shown in Figure 208.

Figure 208

- 183. Install the side cover.
- 184. Install eleven (11) new side cover bolts, and then torque all of the side cover bolts to the specified torque in the sequence shown in Figure 209.
 - 32.8 mm (**1.3 inches**) long bolt, 11 pieces
 - Bolt torque:
 27.1 N•m (2.8 kg-m, 20 ft-lbs.)

HINT: See Reference # 6 in the KIT PARTS REFERENCE TABLE.

185. Remove the O-rings that came on the new bearing retainer bolts and replace them with new O-rings from **PARTS INFORMATION** on page 140.

HINT: See Reference # 8 in the KIT PARTS REFERENCE TABLE.

186. Screw in one (1) original pulley bearing retainer bolt, hand tight.

- 187. Remove the Guide Pin (J-52272) and then install the other pulley bearing retainer bolt, hand tight.
- 188. Torque the two pulley bearing retainer bolts to specified torque.
 - Bolt torque:
 28.8 N•m, (2.90 kg-m, **21 ft-lbs.**)

Figure 211

Install and Adjust the Transmission Range Switch

- 189. Rotate the manual lever to the "N" position (two clicks counterclockwise from the left hard stop).
- 190. Remove the lock nut, washer and manual lever from the manual shaft.
 - They will be reused.
- 191. Adjust the transmission range switch position as follows:
 - a. Install the alignment pin (#J-52306-2) into the Transmission Range Switch Alignment Bracket (#J-52306-1) as shown in Figure 213.
 - Attach the combined alignment tool onto the manual shaft as shown in Figure 214 with part number facing out.

HINT: The combined alignment tool will only insert into the transmission range switch while in Neutral.

- Transmission range switch may need to be rotated to allow pin to align.
- Alignment pin will insert into guide hole in the transmission range switch (Figure 212).
- c. Install the two original bolts for the transmission range switch (Figure 214).
 - Bolt torque:
 5.6 N•m (0.60 kg-m, 50 in-lbs.)
 - Remove the adjustment tool when complete.
- 192. Install the manual lever to the manual shaft.
 - a. Set the original manual lever onto the manual shaft.
 - b. Install the washer and the lock nut.
 - c. Torque the lock nut.
 - Nut torque: 16.3 N•m (1.7 kg-m, **12 ft-lbs.**)

Figure 212

Figure 213

Figure 214

Install Exterior CVT Parts

193. Install the differential side oil seal to the CVT case (Figure 215).

- Use a new oil seal (non-reusable). See Reference # 18 in the **KIT PARTS REFERENCE TABLE**.
- Apply CVT Fluid to the oil seal before installation.
- Drive the differential side oil seal in until the amount of oil seal protrusion from the CVT case edge matches dimension C shown in Figure 216.

194. Install the differential side oil seal to the converter housing (Figure 217).

- Use a new oil seal (non-reusable). See Reference # 18 in the **KIT PARTS REFERENCE TABLE.**
- Apply CVT Fluid to the oil seal before installation.
- Drive the differential side oil seal in until the amount of oil seal protrusion from the torque converter housing edge matches Dimension D shown in Figure 218.

- 195. Install the torque converter housing oil seal to the torque converter housing (Figure 219).
 - Use a new oil seal (non-reusable). See Reference # 17 in the **KIT PARTS REFERENCE TABLE**.
 - Apply CVT Fluid to the oil seal before installation.
 - Drive the converter housing oil seal evenly so that converter housing oil seal sits below the case by Dimension E as shown in Figure 220.

Figure 219

- 196. Install a new fluid filter to the CVT case.
 - Make sure the grommet is attached to the fluid filter.
 - Apply CVT Fluid to the grommet of the fluid filter.

HINT: See Reference # 16 in the KIT PARTS REFERENCE TABLE.

Figure 220

O-ring U-ring U-

Figure 222

- 197. Install the new O-ring to the fluid filter cover.
 - Apply CVT fluid to the O-ring.

HINT: See Reference # 15 in the KIT PARTS REFERENCE TABLE.

- 198. Install the fluid filter cover to the CVT case as follows:
 - a. Locate the tab of the fluid filter cover near the tab of the side cover as shown in Figure 223.
 - b. Push the fluid filter cover onto the CVT case.
 - c. Rotate the fluid filter cover clockwise, and then match the bolt hole of the fluid filter cover and the bolt hole of the CVT case.
 - Confirm that the fluid filter tab is underneath the side cover tab.
 - d. Install the original bolt.
 - 16 mm (**0.6 inches**) long bolt.
 - Bolt torque:
 6.8 N•m
 (0.70 kg-m, 60 in-lbs.)

Figure 223

Figure 224

- 199. Install new O-rings to the original output speed sensor, primary pulley speed sensor and secondary pulley speed sensor and then install them to the CVT.
 - The sensor O-rings are one-time use parts. Do not-reuse.

HINT: See Reference # 19 in the KIT PARTS REFERENCE TABLE.

- Apply CVT Fluid to the O-rings before installation.
- 16 mm (**0.6 inches**) long bolts.
 - > Bolt torque: 5.6 N•m (0.60 kg-m, **52 in-lbs**.)

Figure 228

- 200. Place the CVT on a work surface with the oil pan side facing down.
- 201. Install the original torque converter.

NOTICE Locate the two oil pump engagement tabs on the end of the torque converter snout horizontally while inserting to avoid damaging the torque converter oil seal.

Figure 229

- 202. Measure dimension A to confirm that the torque converter is installed to the correct position (Figure 230).
 - Dimension A: 14.4 mm (0.567 in)

Figure 230

Install the CVT Assembly

203. Install the CVT assembly into the vehicle.

• Refer to NTB18-061 for CVT installation.

204. Connect both battery cables, negative cable last.

205. Fill the transmission with CVT fluid.

 Refer to the ESM for filling and adjusting the CVT fluid level, TRANSMISSION & DRIVELINE > TRANSAXLE & TRANSMISSION > CVT: RE0F11A > PERIODIC MAINTENANCE > CVT FLUID.

206. Reset/reinitialize systems as needed.

- Refer to the ESM, ELECTRICAL & POWER CONTROL > POWER SUPPLY, GROUND & CIRCUIT ELEMENTS, BASIC INSPECTION > INSPECTION AND ADJUSTMENT > ADDITIONAL SEVICE WHEN REMOVING BATTERY NEGATIVE TERMINAL for a listing of systems that require reset/initialization after reconnecting the 12V battery.
- This list often includes items such as radio, power windows, clock, sunroof, etc.

Proceed to the next page.

ADDITIONAL SERVICE WHEN REPLACING CONTROL VALVE OR TRANSAXLE ASSEMBLY

The following procedures, starting on the next page, <u>must be</u> performed in this order:

f.	ERASE DTCS	Page 139

Proceed to the next page.

TCM Reprogramming

IMPORTANT: Repairs performed for this bulletin require CONSULT-III plus (C-III plus) <u>Diagnostic result reporting function-Setting</u> be turned ON and <u>Diagnosis (All Systems)</u> be performed. If not done, it may result in a repair being non-warrantable.

IMPORTANT: Before starting, make sure:

- > ASIST on the CONSULT PC has been synchronized (updated) to the current date.
- > All C-III plus software updates (if any) have been installed.
- > The CONSULT PC is connected to the Internet (Wi-Fi or cable).

HINT:

- Most instructions for reprogramming with C-III plus are displayed on the CONSULT PC screen.
- If you are not familiar with the reprogramming procedure, click here. This will link you to the "CONSULT- III plus (C-III plus) Reprogramming" general procedure.

207. Connect the plus Vehicle Interface (plus VI) to the vehicle.

NOTICE Make sure the plus VI is securely connected. If the plus VI connection is loose during reprogramming, the process will be interrupted and the TCM may be damaged.

208. Connect the AC Adapter to the CONSULT PC.

NOTICE Be sure to connect the AC Adapter. If the CONSULT PC battery voltage drops during reprogramming, the process will be interrupted and the TCM may be damaged.

209. Connect a battery maintainer or smart charger, set to reflash mode or a similar setting, to the vehicle battery.

NOTICE Be sure the battery maintainer or smart charger is connected securely to the battery. Make sure the battery voltage stays between <u>12.0V and 15.5V</u> during reprogramming. If the battery voltage goes out of this range during reprogramming, the TCM may be damaged.

210. Turn OFF all external Bluetooth[®] devices (e.g., cell phones, printers, etc.) within range of the CONSULT PC and the VI.

NOTICE Make sure to turn OFF all external Bluetooth[®] devices. If Bluetooth[®] signal waves are within range of the CONSULT PC and the VI during reprogramming, reprogramming may be interrupted and the TCM may be damaged.

- 211. Turn the ignition ON with the engine OFF.
 - The engine must not start or run during the reprogramming procedure.
- 212. Turn OFF all vehicle electrical loads such as exterior lights, interior lights, HVAC, blower, rear defogger, audio, NAVI, seat heater, steering wheel heater, etc.

NOTICE Make sure to turn OFF all vehicle electrical loads. Make sure the battery voltage stays between <u>12.0V and 15.5V</u> during reprogramming. If the battery voltage goes out of this range during reprogramming, the TCM may be damaged.

- 213. Connect the CONSULT PC to the vehicle to begin the reprogramming procedure.
- 214. Start C-III plus.
- 215. Wait for the plus VI to be recognized.
 - The serial number will display when the plus VI is recognized.
- 216. Select Re/programming, Configuration.

CLAMP (for water hose and heater thermostat assembly)	16439	2
SEAL - O RING (fill tube)	31084	1
WASHER-DRAIN (CVT Oil Pan Drain Plug Gasket)	11026	1

(1) For warranty repairs, Nissan NS-3 CVT Fluid and Loctite 5460 Sealant <u>must</u> be used. For customer pay repairs, Nissan NS-3 CVT Fluid and Loctite 5460 Sealant or their equivalents are recommended.

- (2) Nissan NS-3 CVT Fluid and Loctite 5460 Sealant can be ordered through the Nissan Maintenance Advantage program: Phone: 877-NIS-NMA1 (877-647-6621) or Website: Order via link on dealer portal <u>www.NNAnet.com</u> and click on the "Maintenance Advantage" link.
- (3) One container of Loctite 5460 Sealant is good for approximately 5 repairs. This sealant is not included in any kit.
- (4) Bill out Loctite 5460 Sealant (or equivalent) under **expense code 008**. Do not include the Loctite 5460 Sealant part number on the claim.
- (5) Engagement tool will initially come with 10 O-rings. Additional O-rings are available from Tech•Mate online: <u>www.nissantechmate.com</u>, or by phone: 1-800-662-2001.
- (6) Shop supply.
- (7) Refer to the Electronic Parts Catalog for the correct part number.

CLAIMS INFORMATION

Submit a Primary Part (PP) type line claim using the following claims coding:

If pan inspection shows excessive large debris and CVT is replaced

OPERATION	PFP	OP CODE	SYM	DIA	FRT
Inspect CVT Pan for Excessive Debris = NG		JX49AA			0.3
Replace CVT	(1)	JD01AA JD023A	ZE	32	(2)

(1) Reference the Electronic Parts Catalog and use the applicable CVT assembly part number as the Primary Failed Part (PFP).

(2) Reference the current Nissan Warranty Flat Rate Manual and use the indicated Flat Rate Time (FRT).

OR

If P17F0 **IS** stored and Sub-assembly is replaced (no Belt or Pulse Rotor inspection required)

OPERATION		OP CODE	SYM	DIA	FRT
CVT R&R	(1)	JD01AA JD023A			(2)
Replace Control Valve with P17F0 stored		JX56AA	ZE	32	0.8
Replace CVT Sub-assembly		JX45AA			3.0
Reprogram TCM		JE99AA			(2)

(1) Reference the PARTS INFORMATION table and use the Kit-Pulley Part Number as the Primary Failed Part (PFP).

(2) Reference the current Nissan Warranty Flat Rate Manual and use the indicated Flat Rate Time (FRT).

OR

If P17F0 is **NOT** stored, Belt inspection is performed and Sub-assembly is replaced (Belt inspection shows signs of belt slip, NG)

OPERATION	PFP	OP CODE	SYM	DIA	FRT
CVT R&R		JD01AA JD023A			(2)
Inspect CVT Belt, Belt = NG (Includes control valve R&I)	(1)	JX36AA	ZE	32	1.2
Replace CVT Sub-assembly		JX45AA			3.0
Reprogram TCM		JE99AA			(2)

(1) Reference the PARTS INFORMATION table and use the Kit-Pulley Part Number as the Primary Failed Part (PFP).

(2) Reference the current Nissan Warranty Flat Rate Manual and use the indicated Flat Rate Time (FRT).

CLAIMS INFORMATION (continued)

OR

If P17F0 is NOT stored, Belt inspection and Pulse Rotor inspection is performed, and Subassembly is replaced (Belt inspection is OK, but Pulse Rotor inspection is abnormal, NG)

OPERATION	PFP	OP CODE	SYM	DIA	FRT
CVT R&R		JD01AA JD023A			(2)
CVT Belt and Pulse Rotor Inspection with C/V R&I	Belt and Pulse Rotor Inspection with C/V R&I (1)		ZE	32	1.4
Replace CVT Sub-assembly		JX45AA		52	3.0
Reprogram TCM		JE99AA			(2)

(1) Reference the PARTS INFORMATION table and use the Kit-Pulley Part Number as the Primary Failed Part (PFP).

(2) Reference the current Nissan Warranty Flat Rate Manual and use the indicated Flat Rate Time (FRT).

EXPENSE CODE

EXPENSE CODE	DESCRIPTION	MAX AMOUNT
008	Sealant	\$12.46

OR

If P17F0 is NOT stored, Belt and Pulse Rotor inspection are performed, and only Control Valve is replaced (Belt inspection shows NO signs of belt slip, and Pulse Rotor inspection is NOT abnormal, OK)

OPERATION	PFP	OP CODE	SYM	DIA	FRT
Inspect CVT Belt, Belt = OK	(4)	JX37AA			0.4
Pulse Rotor Inspection	(1)	JX60AA	ZE	32	0.2
Replace Control Valve (Valve Body)		JD48AA			(2)
Reprogram TCM		JE99AA			(2)

(1) Reference the PARTS INFORMATION table and use the Kit-Control Valve Part Number as the Primary Failed Part (PFP).

(2) Reference the current Nissan Warranty Flat Rate Manual and use the indicated Flat Rate Time (FRT).

NOTE: FRT allows adequate time to access DTCs. No other diagnostic procedures subsequently required. Do NOT claim any diagnostic OP Codes with this claim.

KIT PARTS REFERENCE TABLE

NOTE:

- This Table is for reference only. Part numbers listed cannot be ordered individually.
- These part numbers are for identification of the correct part within the kit (part number is listed on the bag for each individual part).
- Some parts have more than one part number listed. In this case, one of the part numbers listed will be in the kit.

KIT-CONTROL VALVE (3170E-X428B) PARTS REFERENCE (Kit Content)

REFERENCE #	DESCRIPTION	PART NUMBER	QTY:
1	VALVE ASSY – CONTROL (Control valve)	31705-X428B	1
2	GASKET-OIL PAN (Oil pan gasket)	31397-3JX0A	1
3	STRAINER ASSY-OIL, AUTO TRANS (Oil pan strainer)	31728-3XX0A or 31728-3XX0B or 31728-3JX0B	1

KIT-PULLEY (31214-3JX9B) PARTS REFERENCE (Kit Content)

REFERENCE #	DESCRIPTION	PART NUMBER	QTY:
4	PULLEY ASSY (Sub assembly: Belt & Pulley)	31209-3JX9B	1
5	SNAP RING KIT (Snap ring kit)	31506-3JX8B	1
6	BOLT (Side cover bolts)	31377-3JX0E or 31377-X420B or 31377-3XX2B or 31377-X424C	11
7	SEAL-O RING (Input shaft O ring)	31526-3MX0A or 31526-X420C or 31526-3XX0C	1
8	SEAL – O RING	31526-8E000 or 31526-28X0C	2

KIT PARTS REFERENCE TABLE (Continued)

REFERENCE #	DESCRIPTION	PART NUMBER	QTY:
9	BOLT (Torque converter case bolts)	31377-X420B or 31377-3JX0E or 31377-3XX2B or 31377-X424C	19
10	SEAL-LIP (Lip seal)	31528-1XZ0A or 31528-1XA01 or 31528-1XX0A	1
11	SEAL-O RING (Case O ring)	31526-X420B or 31526-50X0D or 31526-3JX0B or 31526-3XX0B	1
12	PIN-RET (Manual shaft roll pin)	31906-1XF0A	1
13	PUMP ASSY-OIL (Oil pump)	31340-X420B or 31340-3JX0D or 31340-X420A or 31340-3XX0B	1
14	GSKT-OIL PUMP (Oil pump gasket)	31366-3JX0B or 31366-3JX0A or 31366-3XX0A	1
15	SEAL-O RING (Oil filter cover O ring)	31526-3JX3A or 31526-3JX1B	1
16	FLTR ASSY-OIL,AUTO TRANS (Oil filter)	31726-28X0A or 31726-3JX0A or 31726-3XX0A	1
17	SEAL ASSY-OIL (Torque converter Seal)	31375-3JX1A	1
18	SEAL-OIL,DIFF (Axle seals)	38342-3VX0A	2
19	SEAL-O RING (Primary/Secondary/Output Sensor O-ring)	31526-1XG0C	3
20	SLEEVE-OIL DIST	31374 80X01	1
21	RING-SEAL	31525 3JX0B or 31525 X420A	2

KIT-OIL PUMP (31340-X429E) PARTS REFERENCE (Kit Content)

CVT Assembly Replacement Approval Procedures

If CVT inspection indicates CVT assembly replacement is required:

- a. Complete the PCC CVT Preauthorization Form in ASIST.
- b. Attach the required video (15 seconds or less) to the CVT Preauthorization Form.
 - Failure to submit a continuous video showing evidence of abnormalities and the VIN will cause immediate denial of request for CVT unit replacement.
- c. Call the PCC for authorization at 800-973-9992 (opt 2).

IMPORTANT: Make sure the video has a clear image of the VIN on the F.M.V.S.S. certification label (VIN label).

AMENDMENT HISTORY

PUBLISHED DATE	REFERENCE	DESCRIPTION
October 9, 2019	NTB19-075	Original bulletin published
February 14, 2020	NTB19-075a	Added a complete list of single use parts to PARTS INFORMATION
