

Subject <b>Click Noise at Approximately 20-30 mph</b>		Market <b>USA</b>
Service Category <b>Drivetrain</b>	Section <b>Transfer/4wd/AwdAwd</b>	
Applicability <b>2019 RAV4</b>		

**APPLICABLE VEHICLES**

2019	RAV4
------	------

**CONDITION**

This Tech Tip ONLY applies to 2019 model year RAV4 Adventure/Limited grade vehicles equipped with torque vectoring AWD system.

Some customers may experience a clicking type noise at approximately 20-30 mph with “Normal” or “ECO” drive mode selected.

**RECOMMENDATIONS**

Clicking noise may be heard during engagement/disengagement (connect/disconnect) of the AWD system. This noise is considered a characteristic of the system.

Compare to a known good vehicle prior to diagnosis. See example audio file of characteristic noise in “Link References” section below.

Characteristic click noise example:

- Audio recording was taken from a unit on a bench with component (rear differential/transfer) outside of vehicle.
- Click noise sound level will be reduced when inside vehicle.
