Product Change Notice – I.G. Unit Spacer and Sealant

Dear Valued Customer:

As part of our ongoing efforts to improve product performance and longevity, we will be making a running change from the current I.G. glass spacer and secondary seal to a glass spacer with a PIB primary seal on 6400 bonded vents. The combination of the new spacer and urethane creates a more robust assembly that offers additional strength and durability.

The photo below serves as an example how to quickly identify the new I.G. assembly by the silver paint lines on each end of the operator rail (see yellow arrows). This marking will be applied until January 1st, 2021. There will be no noticeable aesthetic changes to the parts. The change will take effect 30 days from the date of this notice.

Product affected: 6400 series IG Vent Units.

If you have any questions, please feel free to call me directly or your LCI representative. We value and appreciate your business and partnership.

Sincerely,

Scott Vincent
