SUBJECT: SLINGSHOT – Wheel Alignment Kit

MODELS: 2015-2017 SLINGSHOT MODELS

A new wheel alignment kit has been developed for the Polaris Slingshot. This special tool will allow your dealership to easily check and precisely adjust the alignment settings for wheel toe, caster, and camber. These settings are critical for optimal vehicle performance, and should be checked as a regular maintenance item, as well as any time a modification is made to the suspension or steering system.

One Slingshot Wheel Alignment Kit will be auto-shipped to each Slingshot dealer, and are expected to arrive in late March. The kit includes three major components outlined below.

SERVICE PROCEDURE:

A detailed service procedure has been developed to help you check and adjust alignment. In addition, an instructional video has also been created. Click the link below to access the video, and refer to the online Service Manual for the full procedure.
