Instrument Cluster Reprogramming (MID 140) GU, GR

## PI0889 Differential Lock Engagement Status Alarm Update (MID 140)

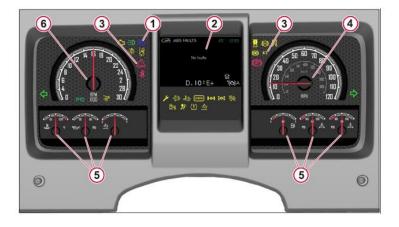

#### (December 2021)

This notification is to announce that Mack trucks has released improved differential lock warning software for the instrument cluster. Previously the driver would be initially alerted to the system engagement with a popup in the cluster along with an audible alarm that lasted approximately five seconds then would automatically dismiss. The improved software keeps the message and alarm persistent until the system is disengaged. The message in the cluster can be ignored for thirty seconds but will return. The following highlights the differences between the current and new software. To perform the update, follow the procedure below

Note: This bulletin does not apply to MACK Trucks Australia.

## **Granite (GR)**

\*Current Software\*

Diff-Lock Engaged: (Popup + audible + Icon) Begins

Popup = 30sec

Audible = 5sec

Icon = Continuous

Popup = No

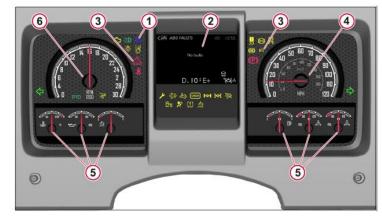

Audible = No

Icon = No
