

Volvo Chassis - Model VN, Hood Release Cable Interference

> Internal Content

For vehicles affected by this issue, the corner of the air box will need to be modified:

Using an appropriate tool, cut the corner off of the air box. This will allow the cable to straighten out and prevent fatigue. A diagram with approximate dimensions can be found below. The blue section is the portion that will be trimmed off:

An example of an air box before and after being trimmed can be seen below:
