Customer statement / workshop findings

Customer statement

Noise from left hand side of the vehicle when actuating the brake pedal

Technical background

Refer to the video on the Bentley Hub referencing TPI 2067598/- noting the following:

The noise is normal operation of the ABS modulator, the modulator actuates with each brake input as part of the blending process between energy regeneration and foundation brake application

No further action/diagnosis is required

If the noise is as detailed within the video, the customer should be advised that this is normal and expected behaviour

▪

No further action/diagnosis is required

Production change

Not applicable

Measure

Refer to the Technical background section
