File	Description
01.jpg	Camera cover of reversing camera does not fold in (shown on vehicle with code W65 (Tailgate)).
	

Cause

Discontinuation of reversing camera folding function.

Model 447.6/7 (Metris)

Info: As of production month 02/2021, the additional equipment description Non-folding reversing camera (code FR1) will be added automatically at the factory to all vehicles of model 447.6/7 with the optional reversing camera (code FR8) (see Important Information no. 01-2021 of 29.01.2021 as well).

XENTRY TIPS

Information: The global shortage of semiconductor components is the reason for this technical adaptation.

Remedy

Note: Do not replace any component parts or carry out any diagnostic work!

Model 447.6/7 (Metris)

As of the introduction of code FR1 (Rearview camera, non-folding), the folding function of the reversing camera is no longer available (discontinuation of camera cover (KAB) control unit (N144)). Consequently, the reversing camera remains open/folded out at all times. The representation of the camera image on the media display of the radio/radio-navigation (N87/15) is not restricted and functions in the usual way.

Information: There are no plans for a retrospective adaptation of the folding function through Aftersales.

Note: The replacement of component parts or invoicing of materials or wage costs under warranty or goodwill is not permitted if this is in connection with the limited function of the camera cover for the reversing camera on vehicles with code FR1 (Rearview camera, non-folding).

Symptoms
Communication/information > Assistance and warning systems > Parking assist > Reversing camera > Malfunction
