

Technical Service Bulletin

13 Starter/generator drive belt is noisy or came off, DTC P2BA300 may be stored in the ECM

13 23 17 2061461/7 March 17, 2023. Supersedes Technical Service Bulletin Group 13 number 23-16 dated January 3, 2023, for reasons listed below.

Model(s)	Year	VIN Range	Vehicle-Specific Equipment
A6	2019 – 2023	All	Not Applicable
A4, A4 allroad, A5, A5 Cabriolet, A5 Sportback, Q5, and Q5 Sportback	2021 – 2023		

Condition

REVISION HISTORY		
Revision	Date	Purpose
7	-	Revised header data
6	01/03/2023	Updated Service solution
5	10/28/2022	Revised Service solution

Customer states:

- There is a grinding/squeaking/tweeting noise coming from the engine compartment.
- Or
- A message in the driver information system (DIS) displays "Electrical system: Malfunction! Please go to workshop" (if the poly V-belt has fallen off).

Workshop findings:

- The grinding/squeaking/tweeting noise is coming from the poly V-belt (alternator belt).
- Or
- The poly V-belt is damaged or has fallen off the wheel roller.

The following DTC may be stored in the engine control module (ECM), J623 (address word 0001):

- **DTC P2BA300** (Starter/Generator mechanical performance).

Technical Background

Deviation on the rollers of the belt tensioner.

Production Solution

Improved belt tensioner in production

Service

Scenario 1: Grinding, squeaking, or tweeting noises

1. Let the engine run at idle speed and assess the noise.

An example of the noise can be found in the following video:

<https://audi-external.kzoplatform.com/player/medium/1823282939031459668>
(Figure 1).

Figure 1. QR code for supporting video.

2. For final confirmation of the source of the noise, spray the inside of the poly V-belt with a little tap water. One spray blast out of a commercially available water spray bottle is enough. The noise should disappear as a result.
3. If the noise disappears after spraying with water, replace the poly V-belt and belt tensioner. **If a new belt tensioner has already been installed, do not replace it again.**

Scenario 2: Poly V-belt damaged or fallen off

1. Replace the belt tensioner and poly V-belt. **If a new belt tensioner has already been installed, do not replace it again.**

Check for correct belt running alignment after poly V-belt and tensioner replacement as follows:

1. Run the engine at idle speed.
2. The belt must not protrude forward or backward over the roller edge of the tensioner (Figure 2, red marks).

Figure 2. Check to ensure that the poly V-belt is not protruding in either direction.

Explanation of Figure 2 (view from above into the engine compartment):

A = poly V-belt.

B = tensioning roller of the belt tensioner.

Note:

Please ensure that the belt tensioner (including the retaining tab) is not damaged during removal. Damage to the component would make analyzing the parts impossible. In such cases, we may charge back the damaged parts.
