

2021- 2023 MY Mach E  
(RCCM/ HVAC)  
4.2.5

Enhancing your heating system.

We've made enhancements to your heating system (HVAC) to improve the heat capability, making your vehicle more responsive to humidity. This should help reduce fogging under certain conditions.

Ford Power-Up delivers software updates that are designed to help make your Mustang® Mach-E® electric vehicle better over time.

2021- 2023 MY Mach E  
(IPMA/ PSCM)  
4.3.4

Updates are bringing the heat.

We've made some enhancements to help while you're out on a road trip this season.

First, if you're heading toward a DC fast charging station (using your vehicle's navigation), your battery will now start to warm up within 20 miles of your destination. This allows the battery to accept a charge at a faster rate in cold weather when you have excess heater capacity, getting you back on the road. Remember, you must enter your fast charging station into the Navigation System in order for preheating to work.

We've also made a quality improvement to the power steering control module. There is nothing you need to do.

Ford Power-Up software updates like this help us make improvements without the inconvenience of asking you to leave home. At Ford we value your satisfaction, and we respect your time
