

2021 – 2023 MY Mach E
(ECG)
5.1.1

Updates are bringing the heat.

If you're heading toward a DC Fast Charging station (using your vehicle's navigation system), your battery will now start preconditioning within 20 miles of your destination. This allows the battery to accept a charge faster in cold or hot weather, getting you back on the road quickly. Remember, you must enter your fast charging station into your Ford vehicle's navigation system for preconditioning* to work.

Ford Power-Up delivers software updates that are designed to help make your Mustang Mach-E® better over time.

*Effectiveness of cabin conditioning may be reduced by extreme outside temperatures.
