

2021- 2022 MY MACH E
(IPMA, PSCM, CCM, DSMC)
FPU 7.0.0

Software Update 7.0.0

This Ford BlueCruise* 1.4 brings the best hands-free highway driving performance yet to keep you hands-free longer. Model Year 2021 and 2022 vehicles also get the latest BlueCruise features - Lane Change Assist and In-Lane Repositioning as well as an upgrade to the ACC system with Predictive Speed Assist.

BlueCruise 1.4 (equipped vehicles only):

- More hands-free highway time: In our internal testing, BlueCruise 1.4 stayed engaged in hands-free mode for an average of 13 times longer compared to BlueCruise 1.0, 8 times longer compared to BC1.2 and 2 times longer compared to BC1.3.
- Much smoother drive: BlueCruise 1.4 brings significantly greater in-lane stability and improved control of the vehicle in the center of the lane - 10x greater in-lane stability than BlueCruise 1.0 and 8x more stability than BlueCruise 1.2 and 1.3.
- One button activation: On-the-road activation of BlueCruise just got easier. Simply press the Adaptive Cruise Control button on your steering wheel to activate BlueCruise while in a Blue Zone. No need to also press the Lane Assist button on the steering wheel.

New Features (Model Years 2021 and 2022):

- Lane Change Assist: allows you to use the turn signal switch to indicate a desired lane change, which the system will perform when the path is clear. It will also suggest a lane change in slower-moving traffic.
- In-Lane Repositioning: can help provide more space by subtly shifting away from vehicles in adjacent lanes, giving you a little extra room when you need it.
- To manage your Ford BlueCruise settings, go to your in-vehicle Driver Assistance screen.

Adaptive Cruise Control (ACC) with Predictive Speed Assist:

- When Predictive Speed Assist is active, the ACC system will now temporarily adjust the vehicle speed in advance of curves and will display a road geometry indicator in the instrument cluster display explaining the reason for the speed adjustment.
- Predictive Speed Assist will now adjust the vehicle speed to the applicable speed limit in advance of speed limit signs.
- The In-vehicle Driver Assistance screen will still show a Speed Sign Recognition slider. To activate Predictive Speed Assist, push the slider to the right.

Software updates are designed to help make your vehicle better over time.

*Available feature. BlueCruise requires a Connected Service plan, FordPass® App, and modem activation. Equipped Ford vehicles come with either a 90-day trial or a 3-year Connected Service plan, after which purchase is required. See Ford BlueCruise | Consumer Reports Top-Rated Active Driving Assistance System | Ford.com for more details. BlueCruise driver-assist features are supplemental and do not replace safe driving or driver's attention, judgment and need to control the vehicle. Only remove hands in a Hands-Free Blue Zone. Always watch the road and be prepared to resume control. See Owner's Manual for details and limitations.

FPU 7.0.1

Software Update 7.0.1

Hit the highway hands-free.

Now that Ford BlueCruise 1.4 is available, we'd like to encourage you to visit www.ford.com/technology/bluecruise to not only learn more but to also plan out your next Ford BlueCruise route. With over 130,000 miles available throughout North America, you can simply consult the online map to discover Hands-Free Blue Zones and get ready to go.

Software updates are designed to help make your vehicle better over time.

*Features available if your vehicle is equipped with Ford BlueCruise. Driver-assist features are supplemental and do not replace the driver's attention, judgment and need to control the vehicle. Ford BlueCruise is a hands-free highway driving feature. Only remove hands from the steering wheel when in a Hands-Free Blue Zone. Always watch the road and be prepared to resume control of the vehicle. It does not replace safe driving. See Owner's Manual for details and limitations.

2021 - 2022 MY MACH E

SYNC
FPU 7.0.2

Software Update 7.0.2

Pre-Collision Assist is now more capable and new feature configuration options are available.

Pre-Collision Assist can now offer protection in even more scenarios:

- If equipped, the Pre-Collision Assist system of Model Years 2021 and 2022 has been enhanced with Intersection Assist has been updated to v2.0. The system can now help avoid potential collisions with pedestrians entering the path of the vehicle from the passenger side as the vehicle is turning.

Vehicles with Ford BlueCruise now have the ability to configure their experience.

- Vehicles equipped with BlueCruise now have the ability to turn the new features On or Off via sliders in the SYNC screen. To configure your settings, navigate to Driver Assistance in the in-vehicle screen, toggle the sliders for Lane Change Assist and In-Lane Repositioning under the Adaptive Cruise Control menu.

- The Speed Sign Recognition slider will now show Predictive Speed Assist to reflect the upgrade to the ACC system.

Software updates are designed to help make your vehicle better over time.

*Available feature. BlueCruise requires a Connected Service plan, FordPass® App, and modem activation. Equipped Ford vehicles come with either a 90-day trial or a 3-year Connected Service plan, after which purchase is required. See ford.com/bluecruise for more details. BlueCruise driver-assist features are supplemental and do not replace safe driving or driver's attention, judgment and need to control the vehicle. Only remove hands in a Hands-Free Blue Zone. Always watch the road and be prepared to resume control. See Owner's Manual for details and limitations.
