

Seat Belt Slow to Retract

AFFECTED VEHICLES

Year	Model	Trim Level
2022–24	Civic	ALL

Dirt or contamination can build up on the seat belt webbing and on the D-ring seat belt guide. This can restrict the seat belt from retracting normally, or stop it from retracting at all. Proper cleaning can restore normal movement.

To clean the seat belt and the D-ring you should use a neutral detergent such as dishwashing liquid. Mix 5% dishwashing liquid with 95% lukewarm water. Use a cotton rag (**do NOT** use microfiber) with the cleaning solution and wipe the belt clean to remove any dirt. Use a toothpick to remove any hard to reach gummy deposits. Clean both the front and back of the D-ring area that contacts the belt. It may be necessary to remove the D-ring to properly clean it.

Do not use a microfiber rag as these rags may scratch and damage the surface treatment on the seat belts.
