## 37 Engine speed increases when driving downhill, vehicle speed is not increased - CVT transmission

37 12 64 2030648/1 September 10, 2012.

Model(s)	Year	VIN Range	Vehicle-Specific Equipment
B8	2009 – 2013	All	With CVT transmission
C7	2012 – 2013		

## Condition

The engine speed increases when driving downhill and using the brake pedal.

## Technical Background

The Multitronic gearbox is equipped with a dynamic control program.

When driving in hilly areas the gear ratio is continuously adjusted to the inclines. When pressing the brake pedal during a downhill grade the gearbox automatically changes down the ratio. This increases the engine braking effect and the engine speed. Vehicle speed is not increased.

## Production Solution

Not applicable.

## Service

Not applicable.

## Warranty

This TSB is informational only and not applicable to any Audi warranty.
