

Service Bulletin

File in Section: 07 - Transmission/Transaxle

Bulletin No.: 08-07-30-009C

Date: February, 2013

TECHNICAL

Subject: HYDRA-MATIC® Front Wheel Drive 4T80-E (MH1) Left Front Axle Seal Leak, Transmission Slips in Gear (Replace Third Clutch Housing with Revised Service Part)

Models: 2001-2008 GM Passenger Cars Equipped with HYDRA-MATIC® Front Wheel Drive 4T80-E Automatic Transmission (RPO MH1)

This bulletin is being revised to update the Warranty Information. Please discard Corporate Bulletin Number 08-07-30-009B (Section 07 – Transmission/Transaxle).

Condition

Some customers may comment on a transmission oil leak and/or that the transmission slips in gear.

Cause

An oil leak may be caused by bushing wear in the third clutch housing, causing excessive fluid build-up at axle seal.

Correction

Important: DO NOT replace the transmission for above concerns.

Replace the third clutch housing with service P/N 8682114, which has revised bushing material to extend life and reduce left front axle seal leaks. Refer to Automatic/Transaxle-4T80-E Transmission Off-Vehicle Repair Instructions in SI for the replacement of the third clutch housing.

Parts Information

Part Number	Description	Qty
8682114	Housing, Third Clutch	1

GM bulletins are intended for use by professional technicians, NOT a "do-it-yourselfer". They are written to inform these technicians of conditions that may occur on some vehicles, or to provide information that could assist in the proper service of a vehicle. Properly trained technicians have the equipment, tools, safety instructions, and know-how to do a job properly and safely. If a condition is described, DO NOT assume that the bulletin applies to your vehicle, or that your vehicle will have that condition. See your GM dealer for information on whether your vehicle may benefit from the information.
