PRELIMINARY INFORMATION

Subject: Battery Test Cold Cranking Amperage (CCA) for Original Equipment Batteries and Testing Tips

Models: 2012-2014 GM Cars and Trucks

Correct battery cold cranking amperage (CCA) ratings and type are critical for proper test results when using the EL-50313. Access to the battery specification label which contains the CCA rating and type may be difficult without component removal. Refer to the table below for the original equipment ratings used to set up a proper battery test and PDI charge.

Note: When setting up a battery for testing, it is required to select "Out Of Vehicle" or a warranty code will not be generated. The battery must be disconnected from the vehicle and the test equipment connected directly to the battery posts. There is no need to remove the battery from the vehicle.

Note: The following battery ratings are for original equipment (OEM) only. Service batteries may have different ratings.
