

# DCC Fuse Installation during PDS

**Service Category** General

**Section** Pre-Delivery Service

**Market** USA

Lexus Supports ASE Certification 

## Applicability

YEAR(S)	MODEL(S)	ADDITIONAL INFORMATION
2016	LS460, LS600H	

## Introduction

To minimize battery discharge during transportation and storage, the DCC fuses (30A) have been removed at the assembly plant and temporarily stored in the blank spaces of the fuse block cover in the engine compartment.

During Pre-Delivery Service (PDS), reinstall the DCC fuses into their original locations.

## Warranty Information

OP CODE	DESCRIPTION	TIME	OFF	T1	T2
N/A	Not Applicable to Warranty	-	-	-	-

## Installation Procedure

1. Push the core of the engine compartment side cover clips and remove them. Then remove the engine compartment side cover.

**Figure 1.**

### Installation Procedure (Continued)

2. Make sure that the wheels are pointing straight ahead and the steering wheel is centered before installing the DCC fuses.

**NOTE**

The procedure above is necessary to perform the VGRS initialization correctly.

3. With the ignition switch OFF, install the DCC fuses into their original locations in the engine compartment fuse block.

4	Install DCC Fuses Here

**NOTE**

- While the vehicle is stored at the dealership, disconnect the negative (-) battery terminal to prevent battery discharge. Refer to Service Bulletin No. [PG001-06](#), "Battery Maintenance for In-Stock Vehicles & Pre-Delivery," for battery maintenance information.
- If the DCC fuses are installed with the ignition switch in the "IG-ON" position, Diagnostic Trouble Codes (DTCs) will be detected. In that case, clear the DTCs.
- If the ignition switch is cycled to the "IG-ON" position without the DCC fuses installed, turn the ignition switch to the "IG-OFF" position and wait for more than 10 seconds before installing the fuses.
