Subject: SHIFT SHOCK - TRANSMISSION CONTROL MODULE (TCM) REFLASH	Bulletin No:	05-007/14
SHIFT SHOCK - TRANSMISSION CONTROL MODULE (TCM) REFLASH	Last Issued:	04/30/2014

#### **BULLETIN NOTE**

- This bulletin supersedes the previous bulletin 05-001/04 issued 5/20/04 and 05-008/07 issued on 09/05/07. The REPAIR PROCEDURE has been revised.
- Changes are noted below beside the change bar in Red.

## **APPLICABLE MODEL(S)/VINS**

All 2002 - 2003 MPV with VINs up to JM3LW28\*\*30367821

### DESCRIPTION

The vehicle's automatic transaxle (ATX) may exhibit shift shock while the engine warms from cold to normal operating temperature. The symptom is intermittent, it does not occur all the time. The shift shock usually occurs during 1-2 or 2-3 upshifts, or 3-2 part throttle downshifts.

In most cases, the cause of the shift shock is from the TRANSMISSION CONTROL MODULE (TCM) software calibration. An updated software calibration is available on the **Mazda Service Support System (MS3)** to correct the shifting concerns.

Customers having this concern should have their vehicle repaired according to the following repair procedure.

## **VEHICLE PRE-INSPECTION**

Inspect the vehicle for a "Port Campaign" rework sticker affixed to the underside of the hood.

NOTE:

- If a "Port Campaign" rework sticker with the number "04/B0/02" is affixed to the hood, the TCM Reflash has already been performed at the port. DO NOT re-flash the TCM. Use M-MDS to check for DTCs and repair the ATX according to the workshop manual.
- If there is no "Port Campaign" rework sticker affixed to the hood, perform the TCM Re-flash. Proceed to the "REPAIR PROCEDURE".

#### Page 1 of 27

**CONSUMER NOTICE**: The information and instructions in this bulletin are intended for use by skilled technicians. Mazda technicians utilize the proper tools/ equipment and take training to correctly and safely maintain Mazda vehicles. These instructions should not be performed by "do-it-yourselfers." Customers should not assume this bulletin applies to their vehicle or that their vehicle will develop the described concern. To determine if the information applies, customers should contact their nearest authorized Mazda dealership. Mazda North American Operations reserves the right to alter the specifications and contents of this bulletin without obligation or advance notice. All rights reserved. No part of this bulletin may be reproduced in any form or by any means, electronic or mechanical----including photocopying and recording and the use of any kind of information storage and retrieval system ----without permission in writing.

Bulletin No: 05-007/14	Last Issued: 04/30/2014
© 2014 Mazda Motor of America, Inc.	

#### **REPAIR PROCEDURE**

- 1. Check transaxle fluid level and add fluid as needed.
- 2. Road test the vehicle to confirm the concern.
- 3. Use M-MDS to check for DTCs.
  - If DTC(s) are retrieved, follow the troubleshooting procedures in the Workshop Manual for specific DTCs. If the shift shock concern is still present after repairs are made, proceed to Step 4.
- 4. Write down the customer's radio station pre-sets.
- 5. Disconnect the negative battery cable.
- 6. Remove the TRANSMISSION CONTROL MODULE (TCM) from the vehicle according to the Workshop Manual (Section 05-17 TCM REMOVAL/INSTALLATION).
- 7. Re-flash the TCM according to the following procedures:
  - **NOTE:** M-MDS WILL NOT BE USED to perform TCM reflash. A desktop PC with internet access and one available serial port is required.
    - If PC does not already have flashing software installed, proceed to "PROCEDURE 1: INSTALL-ING FLASHING SOFTWARE". Flashing software only needs to be installed one (1) time on the PC.
    - If using flash kit and flashing software for the first time (after software has been installed), proceed to "**PROCEDURE 2: FIRST TIME TCM RE-FLASH**".
    - If PC has flashing software installed and "PROCEDURE 2: FIRST TIME TCM RE-FLASH" has been competed at least one (1) time, proceed to "**PROCEDURE 3: QUICK RE-FLASH**" for fast re-flashing.

NOTE: Complete Steps 8 -16 below, AFTER the TCM has been reflashed.

- 8. Reinstall the reprogrammed TCM according to the Workshop Manual (Section 05-17 TCM REMOVAL/ INSTALLATION).
- 9. Reconnect the negative battery cable.
- 10. Road test the vehicle and allow the transaxle to shift through all gears up and down with light throttle, then 1/ 2 throttle, then full throttle.
- 11. Bring the vehicle to a stop.
- 12. Place the gear selector in the "3" position and confirm a 2nd gear start and upshift to 3rd gear; stop again.
- 13. Place the gear selector in "2" position and confirm that 2nd gear is held and no upshift occurs.
- 14. Verify the repair by repeating Step 10, five to six additional times.
- 15. Reset the customer's radio station pre-sets.
- 16. Return the vehicle to the customer.

## PART(S) INFORMATION

Part Number	Description	Qty.	Notes
MT02-K2-001	TCM Flash Kit	1	Additional TCM Flash kits can be purchased from MStore

#### WARRANTY INFORMATION

NOTE:

- Repairs performed outside the 48 month/50,000 mile New Vehicle Limited Warranty will require DCSM or DSA authorization.
- Additional diagnostic time cannot be claimed for this repair.

Warranty Type	A

- 19. The reflash software is now installed.
- 20. Proceed to "PROCEDURE 2: FIRST TIME TCM RE-FLASH".

# PROCEDURE 2: FIRST TIME TCM RE-FLASH:

The figure below identifies the TCM Flash Kit components:

TCM Flash Kit Part Number: MT02-K2-001

NOTE: One kit was previously sent to each dealer. Replacement kits can be purchased on MSTORE.

1	PC equipped with Windows 95, 98, or XP and an RS-232C Serial port
2	Reflash Cube
3	Transmission Control Module (TCM) [not included in kit, remove from vehicle]
4	RS-232C cable
5	110 volt power supply cable
6	On/Off switch
7	TCM connectors

1. Completely "Shut Down" the PC.

2. Turn the Reflash Cube "OFF".

Bulletin No: 05-007/14	Last Issued: 04/30/2014
© 2014 Mazda Motor of America, Inc.	

 Connect RS-232C cable to the Serial port (often identified with IOIOI) on the back of the PC. Use the following figures for the type of PC you have (due to the many different PC configurations, your PC may not match these figures exactly):

#### Compaq (connect to Serial Port-B)

#### **Dell (connect to Serial Port-1)**

- 4. Connect the Reflash Cube 110 volt power supply cable.
- 5. Ensure the Reflash Cube is "**OFF**", then turn the PC "**ON**".

- **NOTE:** If you receive an error message for every com port (Com1, Com2, Com3, or Com4), shut off the reflash cube and shut down the PC. Make sure the reflash cube is plugged in securely (or if there are 2 serial ports, try plugging into the other one) and restart the PC and try again. If all the com ports still give an error message, there may be a hardware configuration problem with the PC. Have a computer specialist inspect and repair the PC. Try to perform the procedure using another PC.
- **NOTE:** If you receive the following error or one similar to it, click "OK" and proceed to the next step. The program will continue to function. When the correct COM port is selected during the reflash procedure, this error will not come up again.
